Smith's Gardens, Inc.

Wholesale Container Nursery

2027 Edibles: Vegetables, Herbs, and Berries!

Terms and Conditions of Sale

Issued January 1st, 2027
This is a wholesale price list only.
This catalog cancels all previous quotations.

DELIVERY:

All delivery of nursery stock is conducted in our vehicles by a member of our staff. Our driver will provide assistance with unloading; however, customers are requested to provide sufficient help to expedite it.

GENERAL DELIVERY SCHEDULE:

Tuesday & Wednesday - Central Ohio; orders should be placed no later than Monday at noon

Thursday - Southwest Ohio (Cincy, Dayton, etc); orders should be placed by Tuesday, 5 pm

Friday - Northern Ohio/Southern Michigan, Indianapolis, and Chicago; orders should be placed by Wednesday, 5pm

FREIGHT CHARGES:

	Distance from SGI	Minimum or Rate Charge	Minimum Invoice
Area 1	0-14 miles	$40.00 or 4.5% of invoice	$500
Area 2	15-59 miles	$55.00 or 5.5% of invoice	$500
Area 3	60-99 miles	$120.00 or 8.5% of invoice	$750
Area 4	100-149 miles	$140.00 or 9% of invoice	$1,000
Area 5	150-249 miles	$190.00 or 9.5% of invoice	$1,000
Area 6	250+ miles	$600.00 or 9.5% of invoice	$3,000

For all other areas please call for a freight quote.

Freight Charges are subject to change without notice based on the fluctuating conditions of the current market.

FUEL SURCHARGE:

For 2027, the fuel surcharge will be re-instated if the EIA Midwest average for diesel fuel rises above $4.30. Our pricing is based on the U.S. Energy Information Administration Index (EIA). We will review this data on a weekly basis.

If re-instated, the fuel surcharge will remain independent from our base rates shown above and will be shown as a separate line item on your invoice. The fuel surcharge amount will be charged on a mileage basis, using the OOIDA fuel surcharge calculator.

We deeply appreciate your understanding and partnership with us in helping to share the dilemma of fuel cost increases. We hope that by sharing this burden together, we can continue to supply you and your customers with the high quality plants and service you've come to expect from Smith's Gardens.

PRODUCT AVAILABILITY:

Plants listed will be available for the 2027 season; however, not all of the plants listed will all be available at all times. Please call ahead or check our website to confirm availability.

GUARANTEE:

We guarantee our plants to be healthy, and to the best of our knowledge, true to name. We will replace or refund the price paid for any plants that prove to be otherwise. It is agreed that the original price paid shall be the maximum damages to which the purchaser is entitled. We will not be held responsible for any other expenses, losses, or inconveniences which the purchaser may sustain as a result thereof. Legal jargon aside, if you are not satisfied with our products, we appreciate knowing just that. Please allow us the opportunity to fix it.

TERMS:

Net 30 days on approved credit. All new accounts are paid in cash or credit card. A 3% service fee is applied to all credit card payments. We will not accept personal checks from new customers until credit is approved. Past due accounts will be assessed a 4% service charge per month.

LOCATION:

We are located at 7520 Home Rd., Delaware, Ohio; west of the Scioto River, between Rt. 745 and Jerome Rd. in southern Delaware County. Plan to visit us anytime you are in the area.

HOURS:

March – November

Monday – Friday *8:00 am – 4:30 pm*
Saturday *Closed*

April – July: We are probably working but call ahead to be sure. Arrangements can be made for someone to be there.

Sunday *Closed*

December - February

Closed for the winter but please call if you have any questions. Again, arrangements can be made for someone to be there.

Edibles 2027

Crop of Flatleaf Parsely 'Peione'

Welcome

We are starting our seventh year growing vegetables and herbs, and there's so many tasty selections that it's hard to contain ourselves! Whether you are looking for juicy melons, fragrant basil, crunchy lettuce, or spicy peppers, we have something for every taste and table. So many tomatoes, so little space, a problem to which we can all relate!

We strive to provide you and your customers with thoughtfully selected varieties, suited to the home gardener. All of our offerings are non-GMO, organic seed when available, and sustainably produced using clean practices. But what does that mean? We've put many hours into researching varieties, gathering input and experiences from our customers, as well as trialing the plants in our own gardens at home (see next page). All seeding, sticking, and potting is done in house, by hand, and all of our vegetable seed is sourced from American companies when possible. We use a bark based media and biologicals like mites and nematodes to control insects.

Our plants are grown in 3.25" pots in trays of 18. We will have cold tolerant selections, like broccoli, kale, and spinach available from mid to late March, and the more heat loving veggies and herbs from late March into early June.

Tomato Basil Chives

What's New for 2027?

In response to your feedback, we've increased production of lettuce, peas, and radishes. We continue to pick up new varieties and are always open to suggestions from our customers. What would you like to see us grow?

New Edible Varieties

Bean 'Maxibel'
Cucumber Pickler 'Super Max'
Cucumber Slicer 'Gateway' & 'Kosara'
Eggplant Japanese 'Violet Delite'
Greens Collard 'Top Bunch 2.0'
Greens Kalette 'Autumn Star'
Lettuce 'Red Butter'
Melon Honeydew 'Honey Orange'
Pea Shelling 'Maxigolt'
Pepper Hot Habanero 'Caribbean Red' & 'Mayan Yellow'
Pepper Sweet Bell 'Islander'
Radish 'Golden Helios' & 'Purple Heart'
Tomato Beefsteak 'Dinner Plate'
Tomato Cherry 'Honeycomb' & 'Juliet'
Tomato Salad/Slicer 'Black Angel', 'Heinz 1370', 'Jolene', 'Primo Red', & 'Strawberry Fields'
Zucchini 'Black Beauty'
Lavender English 'BeeZee Dark Blue' & 'Blue Spear'
Lavender 'Meerlo'
Lavender Spanish 'Evergreat Blue', 'La Diva Berry Bountiful', 'La Diva Garnet Rouge', 'La Diva Lush Purple', & 'Plum Power'
Mint 'Julep'
Nasturtium 'Baby Red', 'Baby Yellow', 'Tip Top Alaska Salmon', & 'Tip Top Alaska Scarlet'
Rosemary 'Abraxas' & 'Barbeque'

Sage 'Grower's Friend'

Note on Days to Maturity: This is based on ideal conditions and grower observations. These are possibilities, not guarantees. They will always depend on weather and growing conditions. Cloudy, cooler or even hotter weather can all effect production time. Herbs can be harvested before fully mature, just take care to do it selectively and sparingly.

Beans

Exposure: full sun

Beans have been used as a food source for thousands of years, the oldest of which were found in Thailand, dating back to 7,000 BC. The word bean applies to many species including *Glycine, Cicer, Phaseolus, Vicia, Vigna* and more. All beans grow best in full sun and average garden soil. They are usually divided into two categories: bush and pole.
Bush (determinate): a plant that grows and sets fruit, that fruit ripens all at once, and the plant is done. A few may set one more flush of fruit.
Pole (indeterminate): a plant that grows and sets fruit until the first hard frost in autumn. Will require trellising.

BEANS *(Phaseolus vulgaris)*

'Amethyst' - Bush type reaching 18" tall by 12-18" wide. Brilliant purple stringless pods with green interiors reach 5-6" long, and turn completely green when cooked. Performs exceptionally well under cool conditions. High resistance to Bean Mosaic Virus. An improved version of Royal Burgundy green bean. 55-60 days to maturity.

'Blue Lake Stringless' - Pole type bean that produces high yields of stringless, tender pods growing 6-7" long. These have the classic full bodied taste of the original Blue Lake, but on a vining plant. Also sold as Blue Lake FM-1K, 60-65 days to maturity.

'Gold Rush' - One of the best wax beans available! Lemon-yellow pods with green tips hang in clusters around the main stem, making them easy to pick. Slender, tender, and thin-skinned, perfect for pickling. 55 days to maturity.

'Jade' - Compact, bush type, disease resistant plants produce tasty, tender, deep green pods that average 6-7" long. Bred to be high-yielding even under cold or heat stress. Harvest when pods are thin, but firm and crisp. 50-55 days to maturity.

'Kentucky Wonder' - An heirloom pole bean producing thick, meaty 7-9" long bean pods. Also sometimes sold as 'Old Homestead' and 'Texas Pole'. Harvest beans when young to avoid strings. 65 days to maturity. (no photo in catalog)

NEW 'Maxibel' - The first full-size, high-quality, bush filet bean on the market. Very straight, dark green, 7" long pods are borne on 22–26" tall sturdy bushes. Excellent flavor. 60 days to maturity. (no photo in catalog)

'Porch Pick' - Compact, small-leaved, bush type plants deliver heavy-duty yields of tender, flavorful, crisp green pods. Bred to be grown in pots on the porch or patio. Harvest when pods are thin, but firm and crisp. 55 days to maturity. (no photo in catalog)

'Prevail' - A main season bush bean that offers strong stress tolerance and consistent performance across a wide range of growing conditions, including heat and heavier soils. Prevail produces high yields of straight, stringless, dark green pods. 55 days to maturity.

'Provider' - The earliest green bean! This easy to grow variety tolerates cool soils meaning it can be planted earlier. Compact, bush type plants produce straight, meaty green beans 5-6" long, excellent for freezing and canning. Introduced in 1965 by Dr. Hoffman of the U.S. Vegetable Laboratory in South Carolina. 50 days to maturity. (no photo in catalog)

'Slenderette' - This compact bush type produces 5" long, slender stringless green beans. Resistant to Bean Mosaic Virus and Curly Top Virus. Bred by the Charter Seed Company of Twin Falls, Idaho and introduced in 1968. 50-55 days to maturity. (no photo in catalog)

'Velour' - A bush type touted as the first ever extra-fine purple filet bean. Straight, slender dark purple pods reach 4-5" long. Beans turn green upon cooking. High resistance to Bean Mosaic Virus and Halo Blight. 50-55 days to maturity. (no photo in catalog)

Bean 'Amethyst'

Bean 'Blue Lake Stringless'

Bean 'Gold Rush'

Bean 'Jade'

Bean 'Prevail'

All varieties on this page 3.25" sold in trays of 18

Broccoli 'Artwork'

Broccoli *(Brassica oleracea var. italica)*

Exposure: full sun

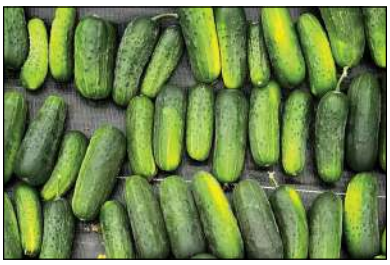

'Artwork' - Artwork is a unique and beautiful dark green stem broccoli that starts similar to a regular crown broccoli but about 10 days after harvesting that first crown, tender tasty long side shoots appear, and continue well into the season. Harvest shoots when the stem is around one inch in diameter. Produces 10-20 shoots per plant, plus the central crown. Plants reach 24-30" tall by 8-12" wide. Slow to bolt and a 2015 AAS Vegetable Winner. 85 days to full crown maturity. F1 hybrid.

Cucumber 'Gracie'

Cucumber 'Pick a Bushel'

Cucumber 'Super Max'

Cucumber 'Gateway'

Cucumbers *(Cucumis sativus)*

Exposure: full sun

Cucumbers are divided into two major categories based on their use: slicing or pickling.

PICKLER

'Gracie' - This European type cucumber has impressive yields of uniform, dark green 4-5" slightly tapered fruits. This variety is well adapted to various climates and a wide range of temperatures. Can be used as a slicer as well. High resistance to Cladosporium Scab, Cucumber Mosaic Virus, and Downy Mildew. Parthenocarpic, does not require pollination to set fruit. Will produce seedless cucumbers if isolated from other varieties. 50 days to maturity. F1 hybrid.

'Homemade Pickles' - A thin skin and extra crunchiness make this one of the best cucumbers for making homemade pickles! This cucumber can be eaten raw, but it is a little drier and crunchier than traditional slicing cucumbers. The blimp-shaped cucumbers are medium green with small white spines, on short 5' vines. Harvest anywhere between 1-5" long. Resistant to Anthracnose, Angular Leaf Spot, Cucumber Mosaic Virus, Downy Mildew, and Powdery Mildew. 60 days to maturity. (no photo in catalog)

'Pick a Bushel' - A compact bush type, vining to about 24", making this a great choice for patio gardens. The sweet, light green cucumbers have a nice firm texture, perfect for pickling when harvested early or leave cukes on the vine to grow a little longer, and harvest for slicing, at 6" long. 2014 AAS Vegetable Winner. 50 days to maturity.

NEW 'Super Max' - Super Max produces high yields of very uniform, blocky, dark green 4.5" cucumbers borne on vigorous vines. It also features strong disease resistance. A small seed cavity, dense flesh, and sweet flavor make for perfect pickles. Only 35 days to maturity. F1 hybrid.

SLICER

'Diva' - Thin-skinned cucumbers are distinctly crisp, sweet, and bitter-free. Adapted to open-field production and a fantastic choice for the home gardener. High yielding and parthenocarpic, Diva does not require pollination to set fruit. Plants will produce seedless cucumbers if isolated from other varieties. Harvest at 5-7" long. 2002 AAS Vegetable Winner. 60 days to maturity. (photo on next page)

'Garden Sweet Burpless' - An exceptional burpless slicing cucumber with a bitter-free, sweet flavor. Medium green, 10-12" long, cylindrical, smooth cucumbers are produced on vigorous plants with good disease resistance. F1 hybrid, 55 days to maturity.

NEW 'Gateway' - Vigorous monoecious vines provide high yields, resilience, and extended production later into the season. Fruits avg. 8–9" long. Good disease resistance. 56 days to maturity.

All varieties on this page 3.25" sold in trays of 18

CUCUMBERS SLICER continued...

NEW 'Kosara' - Kosara is an early parthenocarpic (does not require pollination) Dutch-long cucumber with vigorous vines and straight, dark green fruit that feature subtle ribbing and a small seed cavity, 12-13" long. 50 days to maturity.

'Muncher' - Strong, vigorous, prolific vines produce smooth, tender green cucumbers. Bitter-free and burpless, fruit averages 3" wide by 9" long. Resistant to Cucumber Mosaic Virus. 60 days to maturity.

'Quick Snack' - Exceptionally compact vine makes Quick Snack perfect for growing in containers. Tidy plants are early to produce copious amounts of tasty 2–4" cocktail cucumbers. Plants benefit from support, like from a tomato cage. Bitter free cucumbers are gynoecious and parthenocarpic (does not require pollination to set fruit). 40 days to maturity.

'Saladmore Bush' - The smallest bush type we offer, vines grow 24-26" long making it a great choice for containers or small gardens. Harvest the sweet, crisp cucumbers when 7-8" long by 2" wide. Averages 10-12 fruit per plant. 2014 AAS Vegetable Winner. Resistant to Cucumber Mosaic, Scab, Anthracnose, and Powdery Mildew. F1 hybrid from Seeds by Design. 55 days to maturity. (no photo in catalog)

'Spacemaster Bush' - Long slicing cucumbers on small bushy plants, using just a third of the space normally needed. Dark green, slender, sweet and crisp cucumbers should be harvested at 7-8" long. Resistant to Cucumber Mosaic Virus. 60 days to maturity. (no photo in catalog)

'Summer Dance' - This Japanese burpless cucumber produces long, straight uniform fruit that is glossy and dark green, averaging 1" wide by 9-10" long. Its skin is so thin there's no need to peel. This is a vigorous plant that produces a plethora of lateral vines. Heat tolerant plants are resistant to Downy Mildew and Powdery Mildew. 60 days to maturity. F1 hybrid. (no photo in catalog)

'Sweet Slice' - Burpless and bitter-free, gourmet sweet flavor yet looks like a classic cucumber. Glossy, dark green fruit average 10-12" long, with pure white interiors. Extensive disease resistance. 65 days to maturity, F1 hybrid. (no photo in catalog)

Eggplants *(Solanum sp.)*

Exposure: full sun

The majority of Eggplant are native to Asia, where wild ones can still be found growing today. They were domesticated in the Indo-Burma region, and are mentioned in Sanskrit documents dated back to 300 BC. As the eggplant migrated North and East, they were selected for different traits. Eggplants now come in many different colors, shapes and sizes: deep, dark purples, pinks, white, bicolors, and greens; small and round, long and skinny, or fat and oblong. They are typically classified by the area of origin: African, Indian, Italian, Japanese and Thai.

ITALIAN

'Black Beauty' - This heirloom, introduced in 1902 by Burpee Seed, is the classic, garden standard for eggplants and commonly seen at farmer's markets and on produce stands. The broad, lustrous, dark purplish-black egg-shaped fruits range between 4-6" in diameter and are borne well off of the ground on medium sized plants. Ripens earlier than other traditional Italian varieties. 80 days to maturity. (no photo in catalog)

All varieties on this page 3.25" sold in trays of 18

Cucumber 'Diva'
(listed on previous page)

Cucumber 'Kosara'

Cucumber 'Garden Sweet Burpless'

Cucumber 'Muncher'

Cucumber 'Quick Snack'

Eggplant Italian 'Dancer'

'Dancer' - Deep-pink fruits are semi-cylindrical, mid-sized (7–8" long by 3–4" diameter), mild, and nonbitter. Plants are strong and high-yielding. 65 days to maturity.

'Rosa Bianca' - A beautiful Sicilian heirloom, this plump, rounded eggplant reaches 4-6" across. Its skin is light pink to lavender, streaked with white and violet. The inner flesh is mild and creamy with no bitterness. 80 days to maturity.

JAPANESE

'Fairy Tale' - A petite "patio" variety with miniature eggplants! Plants only grow 18-24" tall, producing 2-4" elongated fruit that are violet streaked white with a green calyx cap. They have a wonderful flavor with no bitterness and very few seeds. 2005 AAS Vegetable Winner, F1 hybrid. 65 days to maturity.

'Millionaire' - An early variety, and highly productive, Millionaire produces shiny, slender, near black fruit 8-10" long. Soft skin with a tender sweet inside, cream to light green in color, with minimal seeds. The perfect choice for grilling and stir-frying. Upright, vigorous plants reach 24-30" tall by 16-20" wide and are very tolerant to high heat in the summer. 65 days to maturity. F1 hybrid.

NEW! 'Violet Delite' - High-yielding, upright plants produce beautiful fruits averaging 8–10" long. The slender, elongated eggplants are glossy with thin, bright purple skin and white, tender, non-bitter flesh.

Eggplant Italian 'Rosa Bianca'

Eggplant Japanese 'Fairy Tale'

Eggplant Japanese 'Millionaire'

Eggplant Japanese 'Violet Delite'

Greens

Exposure: full sun

The word greens is used to describe any leaves that are eaten as a vegetable, sometimes including petioles and shoots. The species of plants with edible leaves are innumerable, and that's not including forage crops that are technically edible but only eaten under famine conditions. Practically all greens grow best in full sun. Some perform better during the cool seasons of spring and fall, and even tolerate freezing temperatures, while others grow best during the heat of the summer. Greens can be collected by taking the whole plant. However, by using the "cut and come again" method (only harvest the mature leaves, no more that one third of the plant) you can greatly extend the bounty of your harvest. We will be listing the lettuce varieties separately on page 10.

BOK CHOY *(Brassica rapa var. chinensis)*
aka Pak Choi, Chinese Cabbage

'Purple Lady' - An adorable baby bok choy! This variety from China features shiny, dark plum purple leaves on bright lime green stems, averaging 6-7" tall. Crunchy and flavorful, a great addition to salads and perfect for grilling. Only 30-40 days to maturity!

'Toy Choy' - Another baby bok choy, each plant is enough for a single serving, but the leaves can also be harvested via "cut and come again" to greatly extend the yield of each plant. Dark green leaves on crisp, bright white stalks are mild and tender. 30-40 days to maturity. F1 hybrid.

All varieties on this page 3.25" sold in trays of 18

Bok Choy 'Purple Lady'

Bok Choy 'Toy Choy'

COLLARD *(Brassica oleracea)*

NEW 'Top Bunch 2.0' - Top Bunch 2.0 collard green is a modern, improved variety known for its exceptional flavor and high-yielding characteristics. Features large, dark green leaves with a smooth texture and a robust flavor. Plants exhibit a compact, upright growth habit, which makes for easy harvesting and makes them well-suited for smaller garden spaces or containers. 50 days to maturity.

Greens Collard 'Top Bunch 2.0'

KALE *(Brassica sp.)*

oleracea var. palmifolia 'Black Magic' - This British introduction is a highly uniform and improved variety of Lacinato/Tuscan/Dinosaur kale. Slow to bolt and cold tolerant, this variety brings a lot to the table. The long, thin, crinkly leaves emerge a pleasing deep green color, then change to deep forest green as they grow. Enjoy fresh when leaves are less than 6" long. Full size leaves are usually sautéed or turned into homemade chips. Like the Siberian Red kale, the flavor improves with frost. Grows 24-30" tall. 30 days to baby leaves; 60 days to maturity. (no photo in catalog)

Kale 'Black Magic'

oleracea var. palmifolia 'Dazzling Blue' - A vigorous Lacinato/Tuscan/Dino-type kale in a range of beautiful blue hues. Leaf color varies from dark blue-green to deep purple to light periwinkle, accented by bright violet to pink midribs. Colors are intensified by cool temperatures. This variety is claimed to be the most cold hardy of all Lacinato-type kale. Plants grow 24-30" tall. This kale is best used raw, as a colorful addition to salads. Bred by Wild Garden Seed in Oregon. 60 days to maturity.

Kale 'Dazzling Blue'

Siberian Red *(B. napus)* - This heirloom has large, beautiful maroon-gray leaves that are ornate in shape and tender in texture. Its leaf is much larger than average kale varieties and are traditionally used in salads and light cooking. The large leaves become more flavorful when nipped by frost. This plant grows to be 2-3' tall. Johnny's Selected Seeds says "To extend storage life, dunk leaves in cold water post harvest". 30 days to baby leaves; 50-60 days to maturity.

KALETTE

NEW 'Autumn Star' - A new type of vegetable developed by crossing kale and Brussels sprouts. Grown and harvested similarly to Brussels sprouts, the florets are open rosettes resembling flowers that grow on tall, upright stalks. The flavor is sweet and nutty. The mini kale florets are a green and purple bicolor. Harvest when 2" in diameter. 135 days to maturity, F1 hybrid.

Kale Siberian Red

SPINACH *(Spinacia oleracea)*

'Red Tabby' - An improved Red Kitten with more noticeable dark red stems and darker, thick, glossy green leaves. Color is most vibrant in warm weather. Red Tabby also has excellent disease resistance to Downy Mildews and improved bolting tolerance. 30-45 days to maturity. F1 hybrid.

'Seaside' - Upright, dark green leaves are smooth and thick. The uniform foliage stays small, extending the "baby leaf" harvest window. Great Downy Mildew resistance. Slow-bolting and a good choice for spring and summer gardens. F1 hybrid, 30 days to maturity.

Kalette 'Autumn Star'

All varieties on this page 3.25" sold in trays of 18

Spinach
'Red Tabby'

Spinach
'Seaside'

Swiss Chard 'Joy's Midnight'

SWISS CHARD *(Beta vulgaris)*

'Bright Lights' – With vibrant colors like crimson, gold, orange, purple, white and pink, Bright Lights is by far the most colorful green we'll be offering! This easy to grow variety is best harvested young while it is still tender, but mature stalks are great for braising. The stalks can be eaten steamed, sautéed, or raw. The tops are eaten fresh or sautéed similar to spinach. Cold hardy, heat tolerant, and bolt resistant, Bright Lights can be grown from early spring to late fall. 1998 AAS Vegetable Winner. 28 days to young leaves; 55 days to maturity. (no photo in catalog)

'Joy's Midnight' - This variety was initially selected from Bull's Blood beet for having larger chard-type leaves, and then selected further for nearly luminescent orange-yellow midribs. The incredibly dark leaves are smaller than the typical swiss chard, but they have the classic chard flavor, and can be harvested as baby or full grown leaves. Both flavor and color intensify as the plant matures. 30 days to baby leaves, 60 days to maturity.

Lettuce 'Buttercrunch'

Lettuce 'Dark Lollo Rossa'

Lettuce 'Mesclun Blend'

Lettuce 'Red Butter'

Lettuce (*Lactuca sativa*)

Exposure: full sun

Lettuce was first cultivated in ancient Egypt for the production of oil from its seeds. It was then selectively bred by the Egyptians into a plant grown for its edible leaves, with evidence of its cultivation appearing as early as 2680 BC. The original leaf lettuce looked a like 30" tall version of romaine. Today's lettuce are broken into three main categories: loose leaf, head, and romaine. Lettuce grows best in the cooler seasons of spring and fall. Intense summer heat typically turns the leaves bitter.

'Buttercrunch' - This classic Bibb-type lettuce was an AAS Vegetable Winner in 1963! Developed by Cornell University, Buttercrunch produces fairly firm heads of delicate, crunchy leaves. Slow to bolt, and resists turning bitter in summer's heat. 30 days to baby leaves, 45 days to mature head of lettuce.

'Dark Lollo Rossa' - A head turner in the garden and your salad! Its ornately frilled, deep red leaves hold their color even under low light and stressful conditions. This compact plant is a cool season variety that should be in your first rotation of the vegetable gardening season. Slow to bolt but will turn bitter in the heat of summer. 30 days to baby leaves; 55 days to full size. (also pictured on pg 4)

'Mesclun Blend' - Tasty, attractive blend of herbs and greens including arugula, mizuna, tatsoi, endive, chervil, radicchio and kale. 30 days to baby leaves; 50-55 days to full size.

NEW 'Red Butter' - This Johnny's Selected Seeds exclusive is a red version of the classic Butttercrunch. Red Butter forms dense rosette heads with attractive, thin, supple leaves that have a delicate buttery flavor. It also exhibits resistance to downy mildew, lettuce leaf aphids, and bolting. Great for harvesting as a cut and come again or wait for the whole head to mature. 30 days to baby leaves; 55 days to full size.

All varieties on this page 3.25" sold in trays of 18

Melons

Exposure: full sun

CANTALOUPE *(Cucumis melo)*

'Aspire' - A French-type cantaloupe, also known as a Charentais. These small melons only reach 1-2 pounds in size, with a beautiful pale green smooth rind accented by distinct dark green stripes. Inside you'll find extra sweet, deep orange flesh. 30" semi compact vines can fit in any size garden or large container. This selection is determinate and will set its fruits all at once. 100 days to maturity. F1 hybrid.

'Orange Sherbet' - This hybrid gourmet cantaloupe produces attractive fruit with firm flesh and a small seed cavity. It is sweet, aromatic, and moderately fibrous for excellent texture and flavorful taste. Melons average 7 to 9 pounds. An excellent choice for the home gardener. 85 days to maturity.

'Solstice' - This hybrid muskmelon produces 6 to 9 pound melons with sweet orange flesh and excellent flavor. Robust vines and comprehensive disease resistance ensure high yields and reliable quality all season long. 80 days to maturity. (no photo in catalog)

'Sugar Cube' - A personal sized melon on equally compact plants! Softball size fruits have an intensely sweet flavor (14% sugar content) with deep orange, aromatic flesh perfect for single servings. Harvest when a gentle tug removes the fruit from the vine. These widely adaptable plants produce early and abundantly, thriving where most melons struggle. An incredibly disease resistant F1 hybrid, compact vines only spread 36-48". 80 days to maturity.

'Sugar Rush' - The larger sibling of Sugar Cube (listed above). Melons average 4 pounds each, with a wonderfully sweet flavor and small seed cavity. 75 to 80 days to maturity. (no photo in catalog)

HONEYDEW *(Cucumis melo)*

NEW 'Honey Orange' - A unique honeydew with pale salmon-orange colored flesh! Its interior is thick, crisp, and as sweet as honey. Medium sized melons average 3 pounds each and have a smooth ivory rind. Early to mature, tolerant of cool conditions, and it has a 10-15 day shelf life. 75 days to maturity.

WATERMELON *(Citrullus lanatus var. lanatus)*

'Bush Sugar Baby' - Ideal for those with limited space, the vines of this variety only grow to 36" long. The compact, drought tolerant vines produce 6 to 12 pound melons with a dark green to near black rind and sweet red interior. 75 days to maturity.

'Cal Sweet Bush' - 2019 AAS Vegetable winner. A breakthrough in breeding has brought us a "true short internode" watermelon. The vines of Cal Sweet Bush only grow 14-18" long. Each plant yields 2-3 very sweet melons, measuring 10-12" across, weighing 10-12 pounds each. 65-75 days to maturity. From Seeds by Design. (photo on 4)

'Dixie Queen' - Introduced 1935, this fast growing American heirloom is perfect for any summer get together. The large 40 pound melons have a bright red interior that is very solid, crisp, juicy, and sweet with off white to beige seeds. Its outer rind is smooth, and a greenish ivory color with dark stripes. 80 days to maturity. (photo on next page)

'Mountain Sweet Yellow' - Despite its name, the flesh of this watermelon is the color of pale cantaloupe. Oblong 20 to 35 pound fruits with dark and light green stripes. Extra firm flesh is sweet and speckled with black seeds. 95-100 days to maturity. (photo on next page)

All varieties on this page 3.25" sold in trays of 18

WATERMELON continued...

'Petite Yellow' - Bright yellow sweet flesh is surrounded by a tough rind that's resistant to cracking. Petite Yellow is also heat tolerant, has good vigor, and prolific fruit set. The outer rind is green with dark green tiger striping. Melons average 6 pounds. 110 days to maturity. F1 hybrid. (photo on next page)

'Sangria' - The first true Allsweet hybrid, Sangria is one of the best-tasting watermelons you will ever eat. The dark red flesh is packed with sugars for an incredibly delicious bite, fresh or chilled. This oblong, striped melon reaches 20 to 24 pounds. F1 hybrid, 90 days to maturity.

'Tendersweet Orange' - Large, oblong melons average 35 pounds each! Classic striped watermelon rind hides deep orange flesh that is tender, juicy, and incredibly sweet. Seeds are white and tipped in black. These melons also hold well on the vine. 110 days to maturity.

Peas *(Pisum sativum)*

Exposure: full sun

NEW 'Maxigolt' - This shelling pea has great flavor and a forgiving harvest window. Maxigolt holds its exceptional sweetness for a longer period than most varieties, even at a larger pea size. This helps ensure high quality even when you can't harvest at the optimum time. Productive 30" vines yield plump 3 1/2–4" long pods at 1 to 2 pods per node. Each pod contains 7 to 8 peas. 65 days to maturity.

'Royal Snap II' - A gorgeous purple snap pea, with the same great taste of the original. Purple pods conceal beautiful green peas. Remove strings from pods before cooking, which will turn them to a green color. Pods average 3" long, with 2 pods per node, on 24" long vines. 60 days to maturity.

'Super Sugar Snap' - A disease-resistant version of the beloved Sugar Snap with more manageable 60" vines. Will need trellising. Early yields are heavier over a shorter period. Remove string from pods before cooking. 60 days to maturity. (photo on next page)

'Oregon Giant' - Abundant yields of large tender snow peas up to 4 1/2" long by 1" wide. The 30" tall, white-flowered vines produce 1 to 2 pods per node. Good disease resistance. 60 days to maturity. (photo on next page)

All varieties on this page 3.25" sold in trays of 18

Peppers *(Capsicum sp.)*

Exposure: full sun

Peppers are native to South America, where they have been eaten since 7,500 BC! They then spread to Central America sometime around 4,000 BC. There are conflicting accounts regarding the introduction of the pepper to Europe, but it then quickly made its way to Africa and Asia. Today peppers are used all around the world and come in an incredible range of colors, sizes, shapes, and flavors. They are usually classified by their shape (ie bell and banana) or flavor (hot vs sweet). We are categorizing varieties by spice and then type. SHU=Scoville Heat Units

EXTREME HOT *(Capsicum chinense)* SHU = greater than 1 million

'Apocalypse Scorpion' - One of the world's hottest peppers, with many anecdotes that it's hotter than the Carolina Reaper. Heavy yields of bumpy, wrinkled peppers begin green and ripen to orange and then red. Sweet, fruity, and intensely hot. Huge plants reach 4ft tall. 90-120 days to maturity. 1.4 million+ SHU.

'Armageddon' - The world's first F1 hybrid super-hot chili. This gives a superb grower advantage in terms of improved plant vigor and fruit uniformity. It is also the earliest maturing super-hot variety, at least 14 days earlier than the competition. Pale green, pendant shaped fruits grow up to 2" by 1.5", have a small tip/tail and mature to bright red. 75-90 days to maturity. 1.3 million+ SHU.

'Carolina Reaper' - A beautiful bright red pepper with a rough surface and a long stinger. Bred in South Carolina and once crowned the world's hottest chile. Its flavor has been described as sweet, fruity, with a hint of cinnamon with chocolate undertones. Uses include hot sauces, salsas, and cooking. It can be eaten fresh - but do so with caution. 90-100 days to maturity. 1.5 million+ SHU.

'Death Spiral' - A fruity, tropical flavor with instant, intense heat! The bumpy, contorted peppers begin lime green and ripen to peach and then red or orange. Huge plants can reach 4ft tall, producing 100's of peppers per plant. 90-100 days to maturity. 1.3 million+ SHU.

'Original Ghost' - Originally called Bhut Jolokia, this Indian heirloom was the trailblazer in the super-hot pepper craze. Wrinkled, pointed peppers begin green and ripen to orange and then red. Heavy yields produced on large plants. 100-120 days to maturity. 1 million SHU.

'Trinidad Moruga Scorpion' - Originating in Moruga, Trinidad, this pepper is absolutely packed with capsaicin oil! 2" rounded, shiny red, bumpy fireballs are packed full of ribs and pith which contains the concentrated heat. Plants grow 3ft tall. 110-120+ days to maturity. 1.5 million+ SHU. (no photo in catalog)

Pepper 'Jamaican Yellow Scotch Bonnet'

Pepper 'Wicked Ghost'

Pepper 'Caribbean Red'

Pepper 'Fatalii'

Pepper 'Helios'

HOT *(Capsicum chinense)* SHU = 100,000 to 1 million

'Jamaican Yellow Scotch Bonnet' - aka Bahama Mama, Bahamian, and Martinique pepper. This heirloom from Jamaica is what gives the unique flavor to Jamaican Jerk and other Caribbean dishes. Bonnet-shaped peppers average 1.5-2" long, beginning green and ripening to yellow-orange. The flavor is described as sweet, fruity, and hot. 100-120 days to maturity. 100,000-350,000 SHU.

'Wicked Ghost' - A wicked hot ghost pepper! Plants grow to 24" tall and produce 3" long fiery red pointed peppers, with smooth shiny skin. This variety matures 10-12 days earlier than the traditional ghost pepper and has higher yields. F1 hybrid, 90-100 days to maturity. 800,000 SHU.

HOT HABANERO

NEW 'Caribbean Red' - This Caribbean selection is hotter than your standard Habanero but with the same distinct taste. Peppers average 1.5" long by 1" wide. Peppers mature from green to bright red on 30" tall plants. 110 days to maturity, 445,000 SHU.

'Fatalii' - This African heirloom is believed to be an early relative of the Ghost pepper. Plants reach 3' tall and produce fruits around 3" long. The conical-shaped chiles taper off to a point and have wrinkly skin that matures from green to yellow. They have a sweet, citrusy flavor and a sting of spice in the first bite. Unlike most habaneros, this heat won't creep up on you slowly, the burn is felt right away. 100-120 days to maturity. 125,000-325,000 SHU

'Helios' - An extra early orange habanero, with higher yields and bigger fruit, when compared to the standard habanero. These peppers have a spicy, citrusy flavor, growing 2.5" long. Plants grow 24-36" tall, and have good yields even in northern, short-season regions. F1 hybrid, 90 days to maturity. 75,000-150,000 SHU.

'Hot Paper Lantern' - A type of Habanero that is earlier, spicier, and more productive! Elongated peppers with a lantern-like shape are 3-4" long. 90 days to maturity. 150,00-450,000 SHU.

NEW 'Mayan Yellow' - 3-4" long lantern-shaped peppers begin green and mature to bright yellow. Mayan Yellow has slightly less heat but a more pungent fruity flavor when compared to other Habaneros. Plants grow 36" tall. 90 days to maturity.

All pepper varieties 3.25" sold in trays of 18

Pepper 'Hot Paper Lantern'

Pepper 'Mayan Yellow'

MEDIUM *(Capsicum annuum)* SHU = 15,000 to 100,000

'Dragon Cayenne' - A spicy hybrid, crossing the Thai Bird's Eye chile with the traditional cayenne. The result is incredibly high yields of pungent, spicy, 3-4" long, thin red peppers. Like the Thai chile, these are easy to dry, but can be used fresh as well. 90 days to maturity. 30,000-50,000 SHU.

'Dragon's Toe' - An unusual F1 hybrid from Southern China. These contorted peppers are typically eaten green but will ripen to red if allowed. The flavor is sweet and hot. 85 days to maturity. 10,000-100,000 SHU.

'Fish' - A variegated heirloom! Both the foliage and fruit of this plant are erratically streaked with cream and white. 3" long peppers begin green heavily striped in cream and mature to orange or red with darker green-purple striping. This unique pepper originated in the Caribbean and was introduced to the mid-Atlantic region in the 1870's where it was used as the secret ingredient in oyster and crab houses, especially around Chesapeake Bay. This variety was almost lost, but was it saved by Horace Pippin and then re-introduced by Seed Savers Exchange in 1995. 80 days to cream and green, 100 days to orange or red. 5,000-30,000 SHU.

MEDIUM AJI *(Capsicum baccatum)*

'Lemon Drop' - An heirloom from Peru, with a bright citrusy heat. Waxy, thin-walled lemon yellow peppers are tear-drop-shaped, reaching 2-3" long, on plants that grow 24-36" tall. Incredibly high yields. 100 days to maturity, 15,000-30,000 SHU.

'Sugar Rush Peach' - Sweet, fruity, and spicy! An extremely prolific aji pepper, harvest when the fruit is a dull peach color. Happy plants can grow up to 5' tall, but typically reach 30-36" tall in the garden. 80-100 days to maturity. 30,000-50,000 SHU.

MEDIUM CAYENNE *(Capsicum annuum)*

'Golden Cayenne' - Elongated, slender, and slightly twisted golden yellow cayenne peppers are 3-5" long by 1/2" wide. Plants are short, compact, and bushy, perfect for containers or the front of garden. 75 days to green, 90 days to gold. 30,000-50,000 SHU.

MEDIUM JALAPENO *(Capsicum annuum)*

'NuMex Pumpkin Spice' - A brilliant orange jalapeño! Small pods are 2-3" long, beginning green and ripening to a beautiful pumpkin orange. Bred by New Mexico State University in 1995, the result of Permagreen Bell Pepper x Early Jalapeño (listed on the next page). Very productive, spicier than the typical jalapeño, and somewhat early, 65 days to green, 80 days to orange. 22,000 SHU.

Pepper 'MexiBell'

Pepper 'Red Hot Cherry'

Pepper 'Mammoth'

Pepper 'Early Jalapeno'

MILD *(Capsicum annuum)* SHU = 500 to 15,000

'Hungarian Hot Wax' - Hungarian heirloom, peppers begin pale yellow and ripen to red, ranges in heat from medium to very hot, 5-6" long by 1" wide. Tolerant of cooler growing temps. 60-85 days to maturity.

'Mariachi' - Mild, multi-colored snacking peppers! 3" long conical pods begin creamy white, before shifting to yellow, then rosy orange, and finally red. They can be harvested at any age. These meaty peppers are great for stuffing, grilling, in salsas, or can be snacked on fresh out of the garden. Plants reach 18-24" tall. 2006 AAS Vegetable Winner. 70 days to creamy white, 85 days to red. SHU can vary: 500-600 Scovilles when grown under ideal conditions, but 1,500-2,000 Scovilles if stressed by extremely hot weather or very dry soil.

PEPPERS MILD BELL *(Capsicum annuum)*

'MexiBell' - This bell pepper looks sweet but packs a mild punch! The flavor of MexiBell is similar to an Anaheim pepper, and the pungent heat can be mellowed by removing the seeds and ribs. Short, blocky peppers average 3.5" across. 1988 AAS Vegetable winner. Tolerant of Tobacco Mosaic Virus. 120 days to green, 140 days to red. F1 hybrid. 100-1,000 SHU.

MILD CHERRY *(Capsicum annuum)*

'Red Hot Cherry' - Also known as the Cherry Bomb pepper. 1.5" rounded, smooth skinned pods are spicy and slightly sweet, ripening to ruby red, resembling large cherries. This pepper is great for pickling, stuffing, and roasting. Plants reach 24-30" tall. Cherry peppers are typically harvested when red. Green peppers can be pungent and bitter. 90 days to maturity. 3,000-5,500 SHU.

MILD JALAPEÑO *(Capsicum annuum)*

'Early Jalapeño' - Sets fruit in cooler temperatures! These peppers will be smaller than traditional jalapeños, averaging 2" long. Small plants produce peppers earlier than any other jalapeño, but with lower yields. Use this variety to start the season, and a later maturing variety for peppers in late summer. Prone to checking (the thin scars on the pepper caused by the skin growing slower than the interior). 60 days green, 80 days red. 2,500-5,000 SHU.

'Jalafuego' - Vigorous plants with very high yields! 4" jalapeño peppers are resistant to checking (the thin scars on the pepper caused by the skin growing slower than the interior) and the plants are incredibly disease resistant. F1 hybrid, 70 days to green, 95 days to red. 4,000-6,000 SHU. (also pictured on pg 4)

'Jedi' - This high yielder produces peppers all season long. Large, spicy jalapeños reach 4" long and are great for stuffing. 72 days to green, 82 days to red. 2,500 to 3,600 SHU. (no photo in catalog).

'Mammoth' - A jumbo jalapeño! 4-5" long peppers have thick walls and great flavor. High yielding plants set fruit over an extended period of time. 75 days to green, 90 days to red. 2,000-5,000 SHU.

All pepper varieties 3.25" sold in trays of 18

Pepper 'Jalafuego'

PEPPERS JALAPEÑO MILD continued...

'Sriracha' - Large, uniform dark green jalapeños ripen to red with a smooth skin. This is the pepper used in the famous Sriracha sauce. 80 days to green, 95 days to red. 1,000-2,500 SHU.

SWEET HEIRLOOMS *(Capsicum annuum)* SHU = 0 to 500

'Giant Aconcagua' - This Argentinean heirloom is named after Mt. Aconcagua in the Andes. It produces huge, 10-12" long by 3" wide peppers in great abundance. One of the largest sweet peppers available, they begin light green changing to orange and finally red when mature. They're sweet, crunchy, and fruity, delicious raw, grilled, or fried. A later maturing variety that will set fruit even under heat and water stress. 100 days to green, 120 days to red. 0 SHU.

'Golden Marconi' - An Italian heirloom with thick walls, thin skin, and a sweet, fruity flavor. Peppers begin light green and mature to golden yellow, averaging 6" long by 2.5" wide. 75 days to green, 100 days to gold. 0 SHU.

'Shishito' - Bright green wrinkled peppers are 3-4" long with thin walls. An East Asian heirloom, perfect sautéed or cut up raw for a salad. The mild flavored peppers are typically harvested when green. As they ripen the fruit turns orange and then red, and becomes a bit sweeter. (The occasional fruit will be spicy). Plants are highly productive, with an extended harvest period. Shishito translates to Lion Head pepper in Japanese, as some believe its creased tip resembles the head of a lion. 85 days to green, 105 days to red. 50-200 SHU.

SWEET BANANA *(Capsicum annuum)*

'Goddess' - Due to its mild, sweet flavor this banana pepper is a great choice for pickling and eating fresh. The thick walled fruits average 8-9" long, mild in flavor when yellow, and sweeter when allowed to ripen to red. The large plants are widely adaptable and highly resistant to bacterial leaf spot. F1 hybrid. 65 days to yellow, 85 days to red. 0-500 SHU.

SWEET BELL *(Capsicum annuum)*

'Candy Cane Chocolate Cherry' - A variegated pepper! Green leaves are splashed and streaked with cream and white. Small bell peppers begin green with white to yellow stripes and ripen to chocolate with cherry red. Deliciously crisp, sweet fruit can be eaten at any stage of ripeness. 60 days to green and white, 75 days to chocolate and red. 0 SHU. (also shown on pg 4)

'Chocolate Beauty' - Shiny green bell peppers ripen to a gorgeous chocolate brown. They taste like a typical bell pepper when green, but develop an extremely sweet flavor when fully ripe. 70 days to green, 85 days to chocolate. 0 SHU.

PEPPERS SWEET continued...

'Emerald Giant' - Bred by the USDA and introduced in 1963, this variety has been selected for its heavy yields and strong plant structure, to support a lot of giant peppers! Huge, blocky fruits begin green and ripen to red, reaching 4-5" long. 70 days to green, 90 days to red. 0 SHU.

NEW 'Islander' - This uniquely colored bell pepper begins a light lavender color with pale yellow flesh, before transitioning to yellow with orange streaks and then finally a deep dark red. Productive plants are sturdy, medium tall, and high yielding. The flavor is mild and slightly sweet. 56 days to lavender, 81 days to red. 0 SHU.

'King Arthur' - Large plants ripen early and produce heavy yields of thick-walled peppers. These bells can be harvested when green, or allow them to ripen to red for a sweeter flavor. Widely adaptable with high disease resistance. F1 hybrid, 60 days to green, 80 days to red. 0 SHU.

'King of the North' - Bred for reliable fruit set in shorter growing seasons. Strong plants support heavy yields of 3-4" blocky green peppers that mature to glossy rich red. 70 days to green, 90 days to red. 0 SHU.

'Orange King' - Incredibly sweet, blocky, thick-skinned peppers average 4-6" tall by 4" wide, with 4-5 lobes. They begin green and turn brilliant bright orange when mature. Plants are sturdy and compact, growing 18-24" tall by 14-18" wide. 75 days to green, 90 days to orange. 0 SHU.

'Snackabelle Red' - Mini bell peppers on a compact plant, perfect for containers or patio gardening! Thick, juicy walls are sweet and perfect for eating at any stage of ripeness. Green peppers ripen to glossy red. 60 days to green, 70 days to red. 0 SHU. (no photo in catalog)

'Sunbright' - Sweet, sunny yellow bell peppers average 4-6" long, with crisp, thick walls. Perfect for stuffing, grilling, salads and snacks. Plants grow 24-36" tall, 65 days to green, 70-75 days to bright yellow. 0 SHU.

'White Zinfandel' - Unique creamy white bell peppers with a slight pink blush. Blocky fruits begin green and ripen to white, averaging 4" long by 3" wide. Plants have excellent disease resistance. F1 hybrid. 70 days to green, 90 days to white. 0 SHU.

All pepper varieties 3.25" sold in trays of 18

Pepper 'Sunbright'

Pepper 'White Zinfandel'

Radishes (*Raphanus sativus*)

Exposure: full sun

Some say radishes most likely originated somewhere between the Mediterranean and Caspian Sea. Others argue that it came from the wild radish native to southwest China, and it's possible that both are right, because their genetics point to two distinctly different ancestors. The radish was an important crop in ancient Egypt, and is depicted on the walls of the ancient pyramids. It has been in use in China for at least 2,000 years, where it then migrated to Japan around 1,000 AD. Radishes are typically round red roots with a bright white center, but they also come in all white, pink, purple and yellow. Like most root vegetables, radishes prefer friable soil to get those perfect round globes.

'Blue Moon' - A stunning hybrid radish that's lavender-blue inside and out! Conical, crisp, mild radishes grow 2-4" across. Exceptionally tolerant to cracking and pithing. 60 days to maturity.

NEW 'Golden Helios' - A beautiful golden exterior with crisp white interiors and a sweet mild flavor. Fast growing and widely adaptable. 30 days to maturity.

'Nero Tondo' - Large 2 - 4" black-skinned with crisp, hot, white flesh. Needs lots of moisture to be mild, tender, and attractive. Plants grow 6-18" tall x 6-9" wide. 50 days to maturity.

NEW 'Purple Heart' - Similar to the Watermelon Radish but with a bright pink to purple interior. Resists bolting, radishes average 3" across. Also suitable for long term storage. 50 days to maturity.

'Watermelon' - This unique daikon radish is round rather than elongated. Its skin is white with green shoulders and its interior is a beautiful watermelon pink. The flesh is crisp and has a mildly sweet taste. The radishes can be harvested between 2-4" across, and should always be harvested before the large leafy tops begin to bolt. 50 days to maturity.

Rhubarb (*Rheum rhabarbarum*)

Exposure: full sun

Rhubarb was first eaten by the English in the 1600's and it was brought to the Americas in the 1800's. Only the tart stalks of the plant are edible and traditionally used in pies. The leaves should not be eaten as they contain a toxin that causes cramps and nausea. Plants typically grow 24-40" tall and wide. They do best in full sun and well-draining soil. Rhubarb should be allowed to settle into the garden its first year and can be harvested the following spring and summer. When harvesting, it's recommended to firmly pull and twist the stalks rather than using a knife. Rhubarb benefits from a balanced spring feed and a phosphorus-rich fertilizer in the fall.

'Glaskins Perpetual' - An English heirloom originating in Brighton in the 1920's, this variety matures quickly and produces heavily all summer and into early fall. Its stalks are naturally lower in oxalic acid, greener, and softer than typical rhubarb. 24-36" tall and wide. (no photo in catalog)

True 1 gallon

Squash *(Curcubita sp.)*

Exposure: full sun

Squash are one of the oldest known crops, native to the Americas, and estimated to have been in use for over 10,000 years! They were originally implemented as containers and utensils. Later the seeds and flesh became an important part of the natives diet, both in North and South America. Squash come in a multitude of colors, shapes, and sizes. Some are best eaten fresh (summer squash), others can be stored for months (winter squash), and some are purely decorative.

SUMMER *(Curcubita pepo)*

'Chiffon' - Uniquely colored butter yellow squash with a white interior. This hybrid is slow to make seed, has an excellent buttery flavor and a smooth, creamy texture. Upright, bush-type plants are early and extremely productive. Squash can be harvested at any size, up to 8" long. 45 days to maturity.

'Tempest' - Bred by Johnny's Selected Seeds, this crookneck squash is vibrant yellow with subtle cream striping. Fruit should be harvested when 4-7" long. Its flavor is rich and nutty, with a firm texture that holds up to cooking. An open habit and soft spines makes harvesting an easy task. Johnny also notes "The presence of the precocious yellow gene causes leaves to express yellow color, which sometimes resembles virus symptoms. This is normal, and the plant will grow and perform as expected." F1 hybrid, 54 days to maturity.

SUMMER ZUCCHINI *(Curcubita pepo)*

NEW 'Black Beauty' - This vigorous plant produces dark green glossy zucchini. 3-4' open bush-type plants are easy to grow producing an abundance of fruit with a really good flavor throughout the summer. Fruit should be harvested at 6-8" long. 60 days to maturity. (no photo in catalog)

'Bush Baby' - High yields of baby zucchini can be harvested at 2-6" long. The squash are striped light and dark green and have a delicate flavor. Compact plants only grow 24" tall and wide, perfect for container gardens. F1 hybrid, 50-60 days to maturity.

'Easy Pick Gold II' - The name says it all! These gold zucchini are borne on a plant with an open habit and no spines for easy, continuous harvests with no pain and less scarring on fruit. Plus this variety is parthenocarpic meaning plants will produce fruit even without pollination. Plants perform best in the ground. 50 days to maturity.

All varieties on this page 3.25" sold in trays of 18

SUMMER ZUCCHINI *(Curcubita pepo)*

'Golden Glory' - Spineless plants have excellent disease resistance, producing high yields of golden yellow zucchini. Harvest when 6-8" long. F1 hybrid, 50 days to maturity. (no photo in catalog)

'Golden Star' - A compact yellow zucchini, Golden Star is a great choice for container gardens. Saffron-colored fruit are straight and should be harvested at 6-10" long. Plants are disease resistant and very productive. F1 hybrid, 55 days to maturity.

'Green Machine' - With excellent disease resistance, wide adaptability, and high yields, Green Machine lives up to its name! Medium green zucchini should be harvested when 6-8" long. Open habit with moderate spines. F1 hybrid. 45 days to maturity.

'Noche' - High yielding, spineless plants produce classic, shiny, dark green zucchini. Harvest when zucchini are 6-8" long. Intermediate resistance to watermelon mosaic virus and zucchini yellow mosaic virus. F1 hybrid. 50 days to maturity.

'Sebring' - Bright golden yellow fruit with an open, bush-type habit for easy picking. Plants produce generous yields of classic golden zucchini. Some tolerance to powdery mildew. Harvest zucchini at 6-8" long. 50 to 60 days to maturity.

WINTER *(Cucurbita sp.)*

pepo 'Bush Delicata' - Bred at Cornell University, with a focus on plant size and disease resistance. Compact, semi-vining plants only reach 4-6' across and are resistant to powdery mildew. The skin of this oblong squash starts creamy white with green stripes and flecks, curing to striped light yellow. The inner flesh is smooth and nutty with hints of butter and brown sugar. Squash average 1.5-2 pounds each, with 2-5 fruit per plant. 2002 AAS Vegetable winner. 100 days to maturity.

maxima 'Bonbon' - This buttercup squash has smooth, dark green skin with faint gray striping and a pronounced gray button on the bottom. This variety is an improvement on the classic 'Buttercup (Burgess Strain)'. Early maturing with a superior flavor, it has a semi-bush habit, with vines maxing out at 8' long. Traditional buttercup squash vines typically grow to 15'. This squash's thick, orange flesh is creamy and incredibly sweet, hence the name Bonbon. Fruit averages 4-5 pounds each. 2005 AAS Vegetable Winner. F1 hybrid, 95 days to maturity.

WINTER ACORN *(Cucurbita sp.)*

pepo 'Carnival' - A cute and colorful acorn squash! Semi-bush plants produce squash that is a splashed and speckled in mint green, dark green, yellow, and orange. The interior is butter yellow and when cooked this squash is tender with a nutty, buttery taste that is more similar to butternut squash. F1 hybrid, 95 days to maturity.

WINTER ACORN continued...

maxima 'Heart of Gold' - This unique acorn squash is striped with green and white! The creamy orange to pale yellow interior is sweet and flavorful. The semi-bushy, compact plants produce good yields of fruit averaging 2-3 pounds each. F1 hybrid. 90 days to maturity.

WINTER BUTTERNUT *(Cucurbita sp.)*

moschata 'Butterscotch PMR' - Small in size, but mighty in flavor! This variety has a sweet, rich, complex taste. Averaging 1-2.5 pounds each, they're the perfect size for dinner, but with no leftovers. Early maturing, no curing is needed before eating, and these squash can be stored for up to 3 months after harvest. The compact vines are resistant to Powdery Mildew, and are a great choice for container gardening. Developed by Cornell University, 2015 AAS Vegetable Winner. F1 hybrid, 100 days to maturity.

'Honeynut' - A cross between a butternut and a buttercup squash, Honeynut took nearly thirty years to perfect through many years of partnership between universities and seed companies. Released by the Vegetable Breeding Institute at Cornell University in 2015, this variety was bred to be more compact, with good resistance to powdery mildew and a superb taste, described as tender and creamy with a sweet, nutty, caramel, and malt-like flavor. Honeynut squash have deep orange flesh and are perfect for 1-2 servings, averaging 4-5" long. Honeynut is later-maturing, so plant early to achieve the best tan color on the outer rind; if stored green, fruits will eventually ripen to tan in storage. 110 days to maturity.

WINTER SPAGHETTI *(Cucurbita pepo)*

'Tivoli' - Compact, bush-type plants can be grown as close as 2 feet apart. Tivoli produces squash averaging 4-5 pounds each. The yellow-beige rind hides long firm noodle-like strands of delicately flavored squash. 1991 AAS Vegetable Winner, F1 hybrid. 90-100 days to maturity. And the name of this squash spelled backwards is 'I Lov It'!

Tomato Cherry 'Chocolate Sprinkles'
(listed on next page)

Tomatoes *(Solanum lycopersicum)*

Exposure: full sun

Tomatoes come in an infinite range of shapes, textures, and colors. Our goal is to provide both unique, hard to find varieties, along with more well known selections. Below they are divided into groups based on their size. Tomatoes are heat loving plants and should be planted after the threat of frost has passed.
Determinate (bush): a plant that grows and sets fruit, that fruit ripens all at once, and the plant is done. (A few may set one more flush of fruit.) The top of the plant ends in a fruiting cluster and does not continue to grow. They tend to be shorter plants, at 48" or less, and good for growing in containers.
Dwarf determinate: a shorter determinate plant
Indeterminate: a plant that continues to grow and set fruit until the first hard frost in autumn.
Indeterminate short internode or *Dwarf Indeterminate*: combines the controlled growth of a "determinate" with the continual production potential of an "indeterminate".

In an effort to provide an incredibly diverse and competitive line-up, we have 125 varieties of tomatoes scheduled for 2027! WOW! That means the majority of varieties will only be available once.

CHERRY < 1.5" in size

'Black Cherry' - A unique color, these large, dusky purple-brown cherry tomatoes have a superb flavor. High yielding, indeterminate, 65-75 days to maturity. (photo on previous page)

'Candy Bell' - A delicious, determinate, grape tomato. A slightly open plant habit makes harvesting easier and little to no pruning is required. F1 hybrid, 65 days to maturity.

'Candyland Red' - This currant type tomato is the 2016 AAS Vegetable Winner. Compared to the traditional Red Currant tomato, these half inch fruits are sweeter, the plant habit is more manageable, and the fruit are formed towards the outside of the plant, making for easier harvest. Indeterminate, 95 days to maturity. (no photo in catalog)

'Cherry Bomb' - Vigorous plants produce high yields of uniform, vivid red fruits with ideal cherry size for harvest and snacking. Classic cherry tomato flavor—firm, sweet, and well-balanced. Unique calyx makes an attractive display when left attached to fruit. Indeterminate, 65 days to maturity.

'Cherry Falls' - These vigorous yet compact, cascading plants are perfect for container gardens and hanging baskets. Abundant trusses of small, round, red cherry tomatoes flow down the plant. Cascading, semi-determinate. 60 days to maturity.

'Chocolate Cherry' - These jewel-like, purplish-red tomatoes—each just an inch across—offer a burst of sweetness perfect for savoring straight from the vine or adding to salads and pastas. All summer long, the generous vines produce trusses adorned with 6 to 8 resilient fruits, holding well on the plant while their skins resist cracking as they ripen. Indeterminate, 85 days to maturity.

'Chocolate Sprinkles' - Bite-sized coppery red tomatoes streaked with green. This variety has great flavor, is crack resistant, with good yields and high resistance to fusarium, nematodes, and tobamovirus. F1 hybrid, indeterminate, 70 days to maturity. (photo on previous page)

TOMATOES CHERRY continued...

'Dancing with Smurfs' - The cute glossy fruit begins green, then ripens to purple and finally red with indigo shoulders. The interior is red, with a classic tomato flavor. Another delicious and beautiful variety from the breeder Tom Wagner, who also introduced the varieties 'Green Zebra' and 'Wagner Blue Green'. Indeterminate, 85 days to maturity.

'Dwarf Mary's Cherry' - Large purple cherry tomatoes have an excellent, complex flavor. Dwarf plants produce mostly 2 oz cherry tomatoes but some variability in size is possible with the occasional fruit reaching 4-5" across. Part of the Dwarf Tomato Project, dwarf indeterminate, 75 days to maturity.

'Dwarf Mocha's Cherry' - A compact cherry tomato that only grows to 20" tall! These 1 ounce round tomatoes begin glossy deep purple with green bottoms. Once ripe, they mellow to a dusky rose purple with dark shoulders. The flavor is mild but can be on the tart side. They're a colorful addition to salads and vegetable trays. Part of the Dwarf Tomato Project, Dwarf indeterminate, 65 days to maturity.

'Gardener's Sweetheart' - Cute, fire engine red, heart-shaped fruit are large for a cherry tomato, with a really good firm texture and a lovely sweetness to match. Long trusses, up to 18" long, bear 20-25 crack resistant fruit that holds exceptionally well on the vine. Bred by Will Bonsall in Maine from a cross between a cherry and a paste, and released in 2014. Indeterminate, 75 days to maturity.

'Geranium Kiss' - A beautiful multiflora tomato with dark green, crinkled leaves. A huge bouquet of flowers is produced, followed by an impressive, crowded tress of round red tomatoes that are pointed at the bottom. The fruit is crisp and firm, with a classic tomato flavor. The compact plant has a thick, sturdy stem but benefits from a little bit of support. This is the perfect choice for patio gardens and one of the most ornamental tomatoes we've ever grown. This dwarf determinate only grows 24-36" tall. 65 days to maturity.

'Gold Nugget' - Deep gold, 1" cherry tomatoes are round, and the first flush of fruit is usually seedless. The flavor is rich and slightly sweet. The compact plants are early and productive, determinate. 55 days to maturity.

NEW 'Honeycomb' - Reliable yields and outstanding sweetness! Honeycomb produces abundant clusters of small, 1" golden yellow tomatoes that ripen evenly on the vine. The flavor is exceptionally sweet and mild with a juicy texture and the tomatoes have excellent resistance to cracking. Indeterminate, 70-75 days to maturity.

All varieties on this page 3.25" sold in trays of 18

Tomato Cherry 'Geranium Kiss' flowers and fruit

TOMATOES CHERRY continued...

'Honeydrop' - Honey-orange fruit are early, super sweet, yet complex in flavor, and crack-resistant. This variety was first selected as an open pollinated alternative to Sungold F1. Indeterminate, 65 days to maturity.

'Indigo Cherry Drops' - Deep, rosy-red with a black-purple cast, bursting with pure tomato flavor! Vigorous, indeterminate, and incredibly productive, bearing large clusters of crack resistant 1" fruits. Bred by Oregon State University, indeterminate, 70-75 days to maturity.

'Indigo Gold Berries' - An eye-catching cherry tomato from Wild Boar Farms. Small, round, fruits start out bright purple and become a glowing golden color with purple blushed shoulders as they ripen. They have a well-balanced flavor, both sweet and acidic. Indeterminate, 80 days to maturity.

Tomato Cherry 'Indigo Cherry Drops'

Tomato Cherry 'Italian Ice'

'Italian Ice' - White to creamy yellow 1" round tomatoes have a sugary sweet flavor. High yielding F1 hybrid, indeterminate. 65 days to maturity.

NEW 'Juliet' - This hybrid grape tomato produces deep red, shiny fruits that average 2" long by 1.5" long, with typically 12-18 fruits per cluster. Very sweet flavor and very crack resistant, Juliet provides an early and extended harvest season. 1999 AAS winner, F1 hybrid, indeterminate, 60 days to maturity.

'Lemonsugar' - Plants have strong vigor and produce high yields of round, yellow to golden orange, crack resistant cherry tomatoes with an excellent, sugary flavor. A later variety, 90-100 days to maturity, indeterminate.

'Midnight Snack' - 2017 AAS Vegetable Winner, Midnight Snack is a unique indigo-type cherry tomato that ripens to red with a beautiful glossy black-purple overlay when exposed to sunlight. The 1.5" round fruit is produced consistently all summer long. Anecdotes say that this is the tastiest of all indigo-type cherry tomatoes. Indeterminate, 65-70 days to maturity.

'Peacevine Cherry' - Prolific red cherries with delicious flavor! A "de-hybridized" selection of Sweet 100 (listed on the next page), known for its incredible flavor and resistance to cracking. Produces impressive numbers of uniform bright crimson .75-1" round tomatoes on large trusses. It also has the highest Vitamin C content in a cherry tomato among 30 varieties analyzed by Rutgers University. Bred by Dr. Alan Kapuler, founder of Peace Seeds in Oregon. Vigorous indeterminate, 80 days to maturity.

Tomato Cherry 'Sugary'

Tomato Cherry 'Sun Gold'

Tomato Cherry 'Sun Sugar'

Tomato Cherry 'Supersweet 100'

TOMATOES CHERRY continued...

'Pink Champagne' - Pink grape tomatoes that are super sweet! 1" long tomatoes are produced by manageable plants that don't vine as much as the typical cherry tomato. Indeterminate, 65 days to maturity.

'Sugary' - These half ounce, dark pink oval tomatoes are one of the sweetest grape tomatoes available! Extremely vigorous plants produce high yields of crack resistant fruit that is pointed at the end. Semi-indeterminate, 60 days to maturity.

'Sun Gold' - Once said to be the "sweetest tomato ever!" Bright tangerine orange to dark gold cherry tomatoes are produced early and abundantly by large, vigorous plants. High resistance to fusarium and tobamo-virus. Developed by Japanese breeder Tokita Seed Company and first introduced to American gardeners in 1992. F1 hybrid, indeterminate, 60 days to maturity.

'Sunpeach' - A dark pink cherry tomato! Flavorful, crack resistant fruit on highly productive, vigorous plants. High resistance to tomato mosaic virus and leaf mold. F1 hybrid, indeterminate, 60 days to maturity.

'Sunrise Bumblebee' - Sweet and tangy! These cute bite-sized tomatoes are marbled yellow and red. Bred by Artisan Seeds for high vigor and adaptability to stressful conditions. Indeterminate, 70 days to maturity.

Tomato Cherry 'Sunpeach'

Tomato Cherry 'Sunrise Bumblebee'

'Sun Sugar' - An even sweeter version of Sun Gold (listed above). Deep yellow to bright orange fruit are produced by vigorous plants with good disease resistance. F1 hybrid, indeterminate, 60-65 days to maturity.

'Supersweet 100' - A very, very sweet, red cherry tomato. This variety produces multitudes of fruit on long trusses. A staple in most home gardens with more disease resistance, especially against soil borne pathogens. Indeterminate, 60-65 days to maturity.

'Sweet 100' - Round red tomatoes are produced on huge, branched trusses. The flavor is sweet but not overwhelmingly sweet. Vigorous vines continue to produce up until the first frost. Sweet 100 has a more compact habit making it better for smaller spaces. Indeterminate, 65 days to maturity.

All varieties on this page 3.25" sold in trays of 18

Tomato Cherry 'Sweet 100'

TOMATOES CHERRY continued...

'Sweet Cherriette' - This variety is likely an interspecific hybrid of *S. lycopersicum* (traditional tomato) and *S. pimpinellifolium* (currant tomato). It's almost always the first tomato of the season, sometimes by two weeks. Perfect for hanging baskets or containers, this dwarf indeterminate has shorter vines. Its fruit is larger than a currant but smaller than a cherry, and the flavor is tarter than you'd expect for a tomato called Sweet Cherriette. Dwarf indeterminate, 35-50 days to maturity.

Tomato Cherry 'Sweet Cherriette'

'Sweet Million' - Exceptional flavor and impressive yields! Producing long, elegant clusters of smooth, dark red fruits 1–1½" in size, these vigorous plants thrive throughout the season. With excellent resistance to common tomato diseases, they mature early and continue to bear fruit until frost. Indeterminate, 60 days to maturity.

Tomato Cherry 'Sweet Million'

'Sweet Pea' - This currant type tomato produces miniature leaves and bountiful blooms beautiful enough for a bouquet. The prolific pea-sized, sweet tomatoes are ruby red and only ¼" in size, on long trusses. The fruits are excellent in salads, and kids love snacking on them. This plant has a cascading habit perfect for hanging baskets and containers, otherwise it will need support in the garden. An occasional plant will produce gold tomatoes. Indeterminate, 60-75 days to maturity.

Tomato Cherry 'Sweet Pea'

'Tidy Treats' - Compact and well organized plants bear small cherry tomatoes with big flavor. Early and high yielding, this tidy plant is perfect for the patio or other smaller gardens. Dwarf indeterminate, 55 days to maturity.

'Tropical Sunset' - Part of the Cream of the Crop series, this variety is aptly named. These cherry tomatoes are streaked in dark gold and rosy-pink, 1.5" round, with tender skin, mild acidity, and a fruity sweetness. These also hold well on the plant and have a good shelf life in the kitchen. Indeterminate, 60-70 days to maturity. (photo on next page)

Tomato Cherry 'Tropical Sunset'

Tomato Cherry 'Valentine'

Tomato Cherry 'Tidy Treats'

'Tutti Frutti Melon' - Small, vibrant pink fruits bursting with sweetness, known for their high yield and abundant clusters. Indeterminate, 75-90 days to maturity.

'Valentine' - 2018 AAS Vegetable Winner. Deep red grape tomatoes are incredibly meaty yet sweet. The fruit also holds longer on the vine without cracking. Early maturing with high yields and good disease resistance. Indeterminate, 55 days to maturity.

Tomato 'Dwarf Awesome'

TOMATOES CHERRY continued...

'Washington Cherry' - High yielding, early and determinate. These round, deep red tomatoes are thick-walled, meaty, and flavorful, with good keeping quality on or off the vine. Widely adaptable. Developed by Washington State University. Determinate, 60 days to maturity.

SALAD/SLICER 1.5 to 3" in size

'Berkeley Tie Dye Pink' - An early tomato with an excellent flavor that is described as deep and rich. Dark pink fruit are flecked with metallic green stripes. Compact indeterminate, 70 days to maturity.

'Better Boy Plus' - One of the best tomato varieties in terms of production, disease resistance, reliability, and adaptability, and it's just been improved! Tomatoes are juicier, sweeter and larger, plus improved disease resistance. F1 hybrid, indeterminate. 75-80 days to maturity.

NEW 'Black Angel' - A very early producer of 6-10oz round tomatoes with an excellent heirloom flavor. High yielding plants are compact and easy to trellis. Determinate, F1 hybrid, 65 days to maturity.

'Black Prince' - An heirloom from Siberia that is excellent for cooler climates. Fruit ripen to deep garnet red with chocolate brown shoulders. 2-3" round tomatoes are very juicy and rich in flavor. Indeterminate, 75 days to maturity.

Tomato Slicer 'Black Angel'

Tomato Salad 'Black Prince'

'Bush Early Girl' - A bush version of the classic Early Girl tomato (listed below), dwarf plants only reach 24" tall, providing plenty of early, meaty, slicing tomatoes. Determinate, 55 days to maturity.

'Dwarf Awesome' - Deep yellow, oblate tomatoes are blushed with red, and their juicy interiors are marbled in orange, yellow, pink, and red. The flavor is described as sweet with a little zing. Dwarf indeterminate plants will need staking. Part of the Dwarf Tomato Project, introduced in 2018. 80 days to maturity.

'Dwarf Goldfinch' - These dwarf potato-leaf plants are prolific producers of medium to large, bright yellow oblate tomatoes—often weighing ten ounces or more—with a delightful, well-balanced flavor. Part of the Dwarf Tomato Project, dwarf indeterminate, 90 days to maturity. (photo on next page)

'Dwarf Hannah's Prize' - Released in 2018, another member of the Dwarf Tomato Project. Globe to oblate shaped tomatoes average 6 to 12 ounces each, perfect for slicing. They have a well-balanced, slightly tart flavor. Dwarf indeterminate, 80 days to maturity. (photo on next page)

All varieties on this page 3.25" sold in trays of 18

TOMATOES SALAD/SLICER continued...

'Early Girl' - Classic extra-early slicer, Early Girl is a longtime favorite producing heavy yields of full-flavored tomatoes, averaging 4 to 6 ounces. Also extremely resistant to blossom end rot, drought, and perfect for "dry farming". Indeterminate, 60 days to maturity.

'Fantastic' - These medium-sized, globe-shaped fruits measure 3 to 5" and boast a vibrant scarlet red color. Known for their rich beefsteak flavor, they are nearly crack-free and ideal for slicing or canning. Expect heavy yields throughout the season. Indeterminate, 65-75 days to maturity. (photo on next page)

'Fourth of July' - Also sometimes called 'Independence Day'. This is claimed to be the earliest non-cherry tomato, and should produce red ripe 4 ounce fruit by July 4th. Bred by Burpee. Indeterminate, 60-65 days to maturity.

NEW 'Heinz 1370' - Excellent for fresh eating as well as ketchup, purees, and sauces. Smooth, round, red, 4-6 ounce tomatoes resist cracking. Developed by the HJ Heinz Company specifically for commercial processing. Determinate, 75 days to maturity.

'Garden Peach' - An heirloom introduced in 1890. Yellow tomatoes blush pink when ripe and have thin fuzzy skins, reminiscent of a peach. Juicy sweet tomatoes are almost fruity in flavor. Indeterminate, 80-90 days.

'Homeslice' - These dwarf, compact plants reach only 18–24" in height, making them ideal for containers or patio gardens. True to their name, they produce early-maturing, vibrant red fruits that are perfect for slicing. Each tomato averages 5 to 6 ounces and boasts a classic, rich tomato flavor. Dwarf determinate, 65 days to maturity.

'Indigo Blue Beauty' - Deep blue-black shoulders feather into a rich rosy red bottom. The colors deepen when in full sun. These tomatoes are high in antioxidants thanks to the blue and purple hues, crack resistant, and are dense and meaty with a great taste. Open pollinated heirloom hybrid. Indeterminate, 80 days to maturity.

Tomato 'Jolene'

Tomato 'Kookaburra Cackle'

Tomato 'Lemon Boy Plus'

Tomato 'Paul Robeson'

Tomato 'Primo Red'

SALAD/SLICERS continued...

NEW 'Jolene' - Smooth, deep red tomatoes. Sets fruit in heat when other tomatoes won't. Round, clean, 8-10oz fruit. Good disease resistance. Determinate, 80 days to maturity.

'Kookaburra Cackle' - Vigorous, high-yielding dwarf plants produce round, brown tomatoes with rich, purple-red interiors. The flavor is described as pleasant and on the tart side. Dwarf indeterminate plants grow 36-48" tall, part of the Dwarf Tomato Project. 70 days to maturity.

'Lemon Boy Plus' - An updated version of the classic Lemon Boy tomato with added disease resistance and sweet, tangy flavor. High yields of round, 7-8 ounce fruits are consistent in size, shape, and quality with very few blemishes. A comprehensive disease package offers wide adaptability and keeps the plants healthy and the tomatoes clean. Can be harvested bright lemon-yellow to deeper golden-yellow. F1 hybrid, indeterminate, 75 days to maturity.

'Paul Robeson' - This Siberian heirloom variety is named in honor of Paul Robeson (1898-1976), famous African-American actor, opera singer, and civil rights advocate. Plants will set fruit at cooler temperatures and its tomatoes have a distinct smoky and earthy flavor, paired with a well-balanced taste that's not too tangy or overly sweet. Dusky purple red fruits have dark green shoulders and a dark red interior, averaging 4" across. Indeterminate, 75-85 days to maturity.

'Pineapple Pig' - Sweet, huge, late and worth the wait! Plants produce excellent yields of 14-16 ounce bi-colored creamy yellow tomatoes with pink stripes. Bred and introduced by Wild Boar Farms. Indeterminate, 80-90 days to maturity.

'Pink Boar' - Whimsical, wine-colored tomatoes are striped in metallic green. The flavor is sweet and juicy, perfect for salads, slicing, and snacks! Bred by Wild Boar Farms, indeterminate. 75 days to maturity.

Tomato 'Pineapple Pig'

Tomato 'Pink Boar'

NEW 'Primo Red' - An early producer of large, round, red, tomatoes on compact plants. Fruit is smooth with a good firmness and perfect for eating fresh. Determinate, 70 days to maturity.

'Rubee Dawn' - A super early tomato with a sweet tangy flavor and impressive size. Smooth, red fruits average 6-8 ounces. Plants have medium vigor and great disease resistance. Indeterminate, 60 days.

Tomato 'Rubee Dawn'

All varieties on this page 3.25"
sold in trays of 18

SALAD/SLICERS continued...

'Rubee Prize' - Heavy yields of large, nearly beefsteak size red tomatoes that are firm and have a great flavor. An F1 hybrid that's nearly seedless. Plants are compact and open, with medium vigor and good disease resistance. Indeterminate, 65 days to maturity.

Tomato 'Rubee Prize'

'Rutgers' - An excellent all-purpose tried and true tomato. Developed at the New Jersey Agricultural Experiment Station, and introduced in 1934. Indeterminate, 75 days to maturity.

Tomato 'Rutgers'

NEW! 'Strawberry Fields' - Reminiscent of a pink heirloom, but bred for healthier plants with fewer defects and higher yields. Pink fruits average 7-10 ounces with a well-balanced flavor that's sweet, acidic, and juicy. F1 hybrid, indeterminate, 75 days to maturity. Bred by Johnny's Selected Seeds.

'Summer Girl' - Described as an improved Early Girl, listed on page 29, Summer Girl produces round red tomatoes that average 5-6 ounces each (larger than Early Girl) and 5 days earlier, with a 20% larger yield. Plus, plants have exceptional disease tolerance. A Burpee exclusive, indeterminate, 50-55 days to maturity.

Tomato 'Summer Girl'

Tomato 'Super Sioux'

Tomato 'Strawberry Fields'

'Super Sioux' - Also marketed as "Super Lakota," this classic red slicer, with an old fashioned tart flavor, was introduced in 1960. The round fruit is crack resistant, with a thick skin, thick walls, and meaty interior. This variety is a good choice for hot, dry locations and sets fruit at higher temperatures. Due to its meatiness, this is also a good choice for processing. Indeterminate, 70 days to maturity.

Tomato 'Sweet Seedless'

'Sweet Seedless' - A sweet tomato with very few seeds. This means the tomato stores its sugars in the tomato flesh and not the seeds, making for a uniquely sweet treat. F1 hybrid, indeterminate, 65 days to maturity.

'Tasmanian Chocolate' - Another variety from the Dwarf Tomato Project, this tomato hails from Australia, as a cross between two heirlooms, 'New Big Dwarf' x 'Paul Robeson' (listed on the previous page). It has since been stabilized and is now an open pollinated variety. This tomato preserves the classic heirloom flavor of its parents, with improved disease resistance and a shorter, stouter, stature - growing to 36-48" tall. The smooth to slightly ribbed, oblate fruit ripen to deep mahogany, averaging 4-6 ounces each. Dwarf determinate, 85 days to maturity.

Tomato 'Tasmanian Chocolate'

All varieties on this page 3.25" sold in trays of 18

Tomato 'Tye-Dye'

SALAD/SLICERS continued...

'Tye-Dye' - Bicolor gold and red tomatoes have the flavor of a large heirloom packed into a small salad tomato. Disease resistant plants produce high yields of uniform fruit. F1 hybrid, indeterminate, 80 days to maturity.

'Valencia' - This heirloom is packed full of tomato flavor, but harbors very few seeds. Round, smooth, meaty fruits are sunny orange. Indeterminate, 75-80 days to maturity.

'Vintage Wine' - Pink tomatoes striped in gold! Mildly sweet and flavorful, these late bicolor fruit reach 1-1.5 pounds. Potato leaf foliage, indeterminate, 85 days to maturity.

Tomato 'Valencia'

Tomato 'Vintage Wine'

Tomato Beefsteak 'Artisan Orange Jazz'

BEEFSTEAK > 5" in size

'Artisan Orange Jazz' - An orange beefsteak with gold stripes! Its flavor is sweet with a hint of peach. This incredibly vigorous variety has been selected under disease pressure for 5 years, so it's resistant to fungal pathogens. Indeterminate, 85 days to maturity.

Tomato Beefsteak 'Beauty King'

'Beauty King' - This large bi-colored tomato is yellow with bold red stripes on the exterior and yellow with lovely red streaking inside. Very meaty fruit are usually about 1 pound each and have a sweet, rich flavor. Bred by Wild Boar Farms, the result of 'Big Rainbow' x 'Green Zebra'. Not to be confused with 'Dwarf Beauty King' from the Dwarf Tomato Project. Indeterminate, 80 days to maturity.

Tomato Beefsteak 'Beefsteak'

'Beefsteak' - The original, classic heirloom variety from 1890. Massive red fruit are solid, meaty, and ribbed, reaching 1-2 pounds each, with a classic juicy tomato flavor. Indeterminate. 90 days to maturity.

'Beefy Purple' - Part of the Cream of the Crop series, these tomatoes are striped in mahogany and dark green, with a purple-red interior. The firm, meaty fruits have few seeds and a good shelf life. The dwarf determinate plants only grow 24-30" tall, making them perfect for the patio. 75 days to maturity.

'Beefy Red' - Part of the Cream of the Crop series, Beefy Red produces meaty tomatoes with few seeds, a juicy texture, and a well balanced flavor. Tomatoes average 12-14 ounces and are brick red with green changing to golden yellow striping. Dwarf indeterminate plants only grow 30-36" tall, 75 days to maturity.

Tomato Beefsteak 'Beefy Red'

All varieties on this page 3.25" sold in trays of 18

Tomato 'Beefy Purple'

'Big Beef' - Large round, ruby red tomatoes are full of flavor and ripen earlier than most beefsteak tomatoes. This tried and true variety was a 1994 AAS Vegetable winner. An F1 hybrid with excellent disease resistance. Indeterminate, 75 days to maturity.

Tomato Beefsteak 'Big Beef'

'Big Brandy' - An Heirloom Marriage from PanAmerican Seed, crossing 'New Big Dwarf' (listed on page 36) and 'Brandywine'. The result is large pink beefsteaks that are earlier to mature, with fewer blemishes on plants that are much higher yielding. Fruits average 12-16 ounces and have a wonderful heirloom flavor. Indeterminate, 75 days to maturity.

Tomato Beefsteak 'Big Brandy'

'Big Raspberry' - A Polish heirloom, this plant produces 6-10 ounce tomatoes that are pinkish red, scalloped and flattened, with a sweet, meaty flavor. It's named for either the color of the fruit, or the prolific way the tomatoes cover the plants, just like a raspberry bush. Vigorous, indeterminate, potato-leaf plants. 75 days to maturity.

'Black from Tula' - One of the largest and best tasting black tomatoes, this heirloom from Ukraine has dark chocolate-red skin and flesh, with a smoky complex flavor. Indeterminate, 80 days to maturity.

Tomato Beefsteak 'Black from Tula'

Tomato Slicer 'Black Krim'

Tomato Beefsteak 'Big Raspberry'

'Black Krim' - An heirloom from Crimea. Tomatoes range from dark purple-red to dusky violet-brown and have a sweet tomato flavor. Indeterminate, 80 days to maturity.

'Bodacious' - A newer introduction from Burpee Seeds, Bodacious produces large, vibrant red, juicy tomatoes. Fruits average 10-12 ounces with a tangy sweetness. Compact vines only grow 5-6' tall and produce 8-10 fruits per week, starting towards the end of July, yielding a total of 40 to 50 tomatoes per plant! Excellent resistance to both cracking and late blight. Indeterminate, 80-85 days to maturity.

Tomato Beefsteak 'Bodacious'

'Brandymaster Pink' - An F1 hybrid of the classic heirloom Brandywine, glossy pink tomatoes have a great heirloom flavor along with improved uniformity, increased yields, and better disease resistance. From Seeds by Design. Indeterminate, 80 days to maturity.

'Buffalosteak' - Old-fashioned beefsteak flavor on a highly disease resistant plant. High yields of bright red fruits that are solid and meaty, with few seeds, averaging 6-7 ounces each. Indeterminate, 75 days to maturity.

Tomato Beefsteak
'Brandymaster Pink'

Tomato Beefsteak 'Buffalosteak'

Tomato Beefsteak 'Buffalosun'

Tomato Beefsteak
'Bush Beefsteak'

Tomato Beefsteak 'Captain Lucky'

Tomato Beefsteak 'Damsel'

Tomato Beefsteak 'Darkstar'

BEEFSTEAK continued...

'Buffalosun' - 2020 AAS Vegetable Winner. Uniquely colored fruits are yellow streaked with red/orange flame coloration. Beautiful on the outside and nicely marbled inside. Compared to other tomatoes with this coloration, Buffalosun has higher yields, a nicer texture, more disease resistance, and less cracking. HUGE fruit averages 18-24 ounces each. Indeterminate, 75 days to maturity.

'Bush Beefsteak' - Compact, early, and prolific! Short bushy plants grow to 36" tall, producing huge amounts of round, red tomatoes, perfect for slicing. Dwarf determinate, 65 days to maturity.

'Captain Lucky' - An heirloom-like green bicolor with incredible flavor. Beefy, 10–16 ounce fruit have a gorgeous interior color that is green and yellow with streaks of bright red and pink. The dense fruit have a silky texture. Plants have an open habit and potato leaves. Indeterminate, 75 days to maturity.

'Carolina Gold' - Beautiful, golden yellow, oblate fruits on a determinate plant. Tomatoes are low in acid and have good cracking resistance. Also some disease resistance. Determinate, 70-75 days to maturity.

Tomato Beefsteak 'Carolina Gold'

Tomato Beefsteak 'Cherokee Carbon'

'Cherokee Carbon' - An F1 hybrid of two heirloom tomatoes, 'Carbon' x 'Cherokee Purple', Cherokee Carbon is an Heirloom Marriage developed by Pan-American Seed. When compared to its parents, Cherokee Carbon has improved vigor and higher yields of purple tomatoes with less blemishes that mature earlier. Indeterminate, 75-80 days to maturity.

'Cherokee Purple' - An heirloom from Tennessee, dating back to the late 1800's. Its large fruit is dark pink to dusky purple, with a dense juicy texture and rich flavor. Indeterminate, 85-90 days to maturity. (photo on next page)

'Damsel' - Damsel combines the flavor of an heirloom with the performance of a hybrid. Deep pink tomatoes are round, averaging 8-12 ounces each, and hold for several days at peak ripeness. The flavor is sweet, rich, and tangy. Moderately vigorous vines produce high yields and skin may crack under stress. Indeterminate F1 hybrid, 70-75 days to maturity.

'Darkstar' - Large, oblate fruits weighing 8 to 10 ounces feature a deep purple beefsteak-style appearance with slightly ribbed shoulders. The dark purple-red flesh offers a rich, smoky taste and a texture reminiscent of varieties like Cherokee and Carbon. Darkstar produces abundant harvests, showing improved vigor and delivering superior fruit quality compared to most heirloom types. Indeterminate, 70-75 days to maturity.

'Delicious' - This tomato held the Guinness World Record as the largest tomato ever grown at 7.75 pounds for over 28 years. Big scarlet red beefsteaks have few seeds and store well. Pennsylvania heirloom, indeterminate. 85 days to maturity.

All varieties on this page 3.25" sold in trays of 18

BEEFSTEAK continued...

NEW 'Dinner Plate' - Red heart-shaped tomatoes reach up to 2lbs each and have the potential to cover a plate. One disclaimer reads "The plants do produce some really large fruit that depending on the size of your plates, could conceivable cover one, but the sizes do vary." Indeterminate, 85 days to maturity.

'Dwarf Choemato' - Golden yellow tomatoes with red swirls and streaks. The flavor is well-balanced and mildly sweet. From the Dwarf Tomato Project, this vigorous variety only grows 48" tall. Sturdy supports are recommended due to the high yields of meaty tomatoes. Introduced in 2022, dwarf indeterminate, 80 days to maturity.

'Galahad' - 2020 AAS Vegetable Winner. These large, round fruits weigh around 12 ounces and feature broad shoulders with subtle ribbing. Their sweet, meaty flavor impressed AAS judges, outperforming similar varieties in taste and offering excellent crack resistance. Ideal for canning, salsa, sauces, and sandwiches, they're as versatile as they are delicious. The vigorous, high-yielding plants are also resistant to Grey Leaf Spot and extremely resistant to late blight. Determinate, 75 days to maturity.

'German Johnson' - This pink heirloom has it all: earlier, more productive, and more uniform than Brandywine, the typical go to heirloom. Fruits have a deep acidic flavor and creamy texture. Their shoulders are typically striped with green, even when ripe. Indeterminate, 75-80 days to maturity.

'Giant Belgium Pink' - Giant fruit average 1-2 pounds! Deep pink tomatoes have a sweet, mild flavor with low acid. Excellent for slicing or juicing. This heirloom has been around a long time, but it's exact origin is unknown. Indeterminate, 85 days to maturity.

'Gold Medal' - Large, bicolor yellow and red tomatoes average over a pound each! Yellow fruit blushes with red, radiating from the blossom end. The interior flesh is marbled as well, and has a sweet, low acid flavor. Indeterminate, 80 days to maturity.

TOMATO BEEFSTEAKS continued...

'Great White' - Large, creamy white to palest yellow tomatoes, sometimes blushed with pink, said to taste very fruity, "delicious and exotic". Touted as the best white tomato available, low in acid and seeds. Indeterminate, 80-85 days to maturity.

'Harvest Moon' - Heirloom virtues without the problems! Strong, disease resistant plants produce firm, uniformly sized golden fruits averaging 7–10 ounces. Inside, the gold fruits reveal a striking red blush with a slightly sweet flavor and low acidity. Harvest Moon delivers a steady, extended harvest with excellent fruit production from top to bottom. The compact indeterminate plants have a well-balanced growth habit, making them easier to manage. Bred and introduced by Johnny's Selected Seeds. Indeterminate, 75 days to maturity.

'Italian Goliath' - An excellent choice for the home garden, with good disease resistance and good yields of bright red beefsteaks that are sweet, juicy, and flavorful. Indeterminate F1 hybrid. 75-80 days to maturity.

'Kellog's Breakfast' - This massive heirloom tomato is the color of orange juice! The fruit is meaty and has few seeds, making it the perfect addition to your morning BET. Originated in West Virginia, indeterminate, 85-90 days to maturity.

Tomato Beefsteak 'Kellog's Breakfast'

Tomato Beefsteak 'Lucky Swirl'

'Lucky Swirl' - From the Dwarf Tomato Project, Lucky Swirl produces tomatoes that range from 5 to 20 ounces. The fruit is a yellow/red bicolor, slightly ribbed and oblate. The texture is juicy and meaty, with a mild sweet flavor. Dwarf indeterminate, 90 days to maturity.

'Marmalade Skies' - Smooth, blemish-free fruits ripen evenly without green shoulders, showcasing a rich dark orange hue and an oblate shape with moderate ribbing. Averaging 7–8 ounces, the fruits are consistently sized on tall, vigorous plants. This variety matures earlier and yields more abundantly than Chef's Choice Orange. Bred and introduced by Johnny's Selected Seeds. Indeterminate F1 hybrid, 75 days to maturity.

'Mortgage Lifter' - Mortgage Lifter was developed in the 1940's by a West Virginia auto mechanic. His resulting tomato plants sold so well, he was able to pay off his mortgage. This plant produces large, smooth pink tomatoes averaging 1 pound each. Indeterminate heirloom. 90-95 days to maturity.

All varieties on this page 3.25" sold in trays of 18

TOMATO BEEFSTEAKS continued...

'Mr. Stripey' - An heirloom discovered in Georgia in the 1990's. Mr. Stripey fruit looks similar to the Pineapple tomato, but these are red tomatoes with orange-yellow stripes, and a higher acid content. Juicy flavorful fruits average 1-2 pounds, indeterminate, 80-85 days to maturity.

Tomato Beefsteak 'Mr. Stripey'

'New Big Dwarf' - An heirloom from Michigan, released in 1909. Large, 10-16 ounce tomatoes are very oblate and deep pink in color. High yielding, determinate plants only grow 24-48" tall, making them a smart choice for containers or patio gardens. Dwarf determinate, 90 days to maturity.

Tomato Beefsteak 'New Big Dwarf'

'Park's Whopper Improved' - Big, juicy, and meaty! Earlier and tastier than the original Whopper, with big red, 4" fruits that feature improved disease and crack-resistance, as well as a more uniform fruit size. Indeterminate, 65 days to maturity.

Tomato Beefsteak
'Park's Whopper Improved'

Tomato Beefsteak
'Patty's Striped Beefsteak'

'Patty's Striped Beefsteak' - Stunning bicolor fruit are delicately striped in hues of red, gold, and yellow. This variety combines improved yields and larger size with a sweet, heirloom flavor. Indeterminate, 75 days to maturity.

'Solar Flare' - A smaller red beefsteak with gold stripes and amazing flavor, averaging 6-12 ounces each. Its breeder, Wild Boar Farms, describes it as "very meaty with luscious, sweet red tomato flavor". Indeterminate, 75 days to maturity.

Tomato Beefsteak 'Solar Flare'

'Supersteak' - Produces extra-large, oblate fruits weighing between 1 and 2 pounds! Renowned for its dense, meaty texture and smooth, attractive skin, this variety offers bold, full-bodied flavor along with reliable crack resistance. The vigorous, high-yielding plants make Supersteak a favorite among home gardeners and an outstanding choice for slicing. Indeterminate F1 hybrid, 80 days to maturity.

'Tiffen Mennonite' - An heirloom variety from the Mennonites of Wisconsin. Big, pink, 12-16 ounce beefsteak fruit are somewhat variable in shape, many with a rather ribbed appearance while some are a more flattened globe shape. Compared to the more well known heirloom Brandywine, this variety is earlier to mature with heavier yields of slightly larger fruits with a sweeter flavor. Indeterminate, 85 days to maturity.

'Dwarf Sneaky Sauce'

BEEFSTEAKS continued...

'Virginia Sweets' - An heirloom from Virginia, this enormous, bicolor tomato is dark yellow with red stripes radiating from the bottom of the fruit. It has a full rich flavor, described as super sweet, and not too tangy. The perfect choice for sandwiches, salads, or cooking. Heavy yields on indeterminate plants. 80 days to maturity.

'Watermelon Beefsteak' - A West Virginia heirloom from the 1800's, these tomatoes are the color of watermelon! Large fruit average 1-2 pounds, with a juicy, mild, sweet tomato flavor. Indeterminate, 80 days to maturity.

'Weaver's Black Brandywine' - 1920's Pennsylvania heirloom, potato leaf variety. Large dusky rose to brown-purple fruit with rich, complex flavor and good yields. aka Original Black Brandywine, indeterminate. 85 days to maturity.

Tomato Beefsteak
'Weaver's Black Brandywine'

Tomato Paste 'Amish Paste'

PASTE / ROMA

'Amish Paste' - This heirloom is from an Amish community in Wisconsin, meaning it's perfectly adapted to our shorter, humid summers. Large blocky red plum to strawberry-shaped tomatoes. Indeterminate, 85 days to maturity.

'Big Mama' - Incredibly meaty and flavorful with very few seeds. Larger than most plum tomatoes, averaging 5" long by 3" wide. One of the best performers in our at home trials. Indeterminate F1 hybrid. 80 days to maturity.

'Black Plum' - Also sometimes called 'Russian Black', this heirloom produces 3" long oblong tomatoes with mahogany brown skin. Great for making richly colored sauces. Indeterminate, 85-90 days to maturity.

'Dwarf Sneaky Sauce' - High yields of red, meaty, somewhat heart-shaped paste tomatoes are produced on dwarf plants. Averaging 4-6 ounces each, the flavor is described as well-balanced and pleasant. From the Dwarf Tomato Project, introduced in 2018, dwarf indeterminate. 75 days to maturity.

'Giant Garden Paste' - Sugary and tangy, this late maturing variety produces large red oblong tomatoes that are solid and meaty. Heavy yielding and crack resistant. F1 hybrid, indeterminate, 95 days to maturity.

Tomato 'Giant Garden Paste'

TOMATOES PASTE / ROMA continued...

'Jersey Devil' - An American heirloom from New Jersey. Plants produce heavy but late yields of 5-6" long, tapered, bright red, paste tomatoes with a pointed end, few seeds, and a very good taste. Indeterminate, 85-90 days to maturity.

'San Marzano' - The most famous heirloom paste tomato from Italy, where they are grown in rich volcanic soil at the base of Mount Vesuvius. Legend has it that the original San Marzano seeds came to southern Italy in 1770 from royalty of Peru as a gift to the Kingdom of Naples. Indeterminate, 80 days to maturity.

'Saucy Lady' - Crimson red tomatoes are extremely dense and firm with a sweet flavor, excellent for making silky smooth sauce and paste. A very productive, determinate plant. 80 days to maturity.

'Speckled Roman' - Bright red tomatoes covered in faint yellow and orange stripes, 5" long. Introduced in 1999, plants are very productive, producing meaty fruit with few seeds. Indeterminate, 85 days to maturity.

'Sunrise Sauce' - A much sweeter flavor than others in its class! Sunrise Sauce produces early and high yields of orange, 4-6 ounce, Roma-shaped fruits within a concentrated period, which makes it perfect for saucing. It has exceptional quality and flavor, and cooks down quickly. It's also the perfect patio tomato, with high resistance to fusarium and verticillium wilt. Determinate, F1 hybrid, 60 days to maturity.

Basil Genovese 'Lihi Prospera Active DMR'

Basil Genovese 'Mia Prospera DMR'

Basil Genovese Prospera Large Leaf DMR

Basil Genovese 'Prospera Red'

Basil Genovese
'Rutgers Obsession DMR'

Basil is thought to have originated in India, where it's been in use for over 5,000 years. Basil is used around the world in both savory and sweet dishes, teas, cocktails, and it has a strong history in traditional medicines. With over 150 cultivars worldwide, its flavors include sweet, spicy, lemon, licorice, cinnamon, and clove. Leaves come in both green and purple. Basil is very sensitive to the cold and should only be grown outdoors after the threat of frost has passed. Site in light shade to full sun. Do not let the plants flower, as this will halt leaf production. Harvest frequently to ensure an endless supply of fresh, tender leaves.

Note: Basil Downy Mildew *(Peronospora belbahrii)* was first identified in Uganda in 1930 and finally made its way to Florida in fall of 2007. It has caused significant economic damage to commercial growers everywhere and made growing sweet basil in the home garden even more difficult. With this in mind, we've tried to choose varieties that are more disease and mildew resistant, including three Rutgers DMR varieties and three Prospera DMR varieties.

GENOVESE / ITALIAN *(Ocimum basilicum)*

'Lihi Prospera Active DMR' - This compact Genovese basil is highly resistant to downy mildew and slow to bolt. Its dark green glossy leaves are heavily cupped, growing 3-4" long. Excellent for containers and well-suited for tip and leaf harvesting. Not recommended for bunch harvesting. An improvement of (and replacing) Prospera Compact. 75 days to maturity.

'Mia Prospera Active DMR' - Mia is a multi purpose Genovese basil with dense, slow-bolting plants that produce large, 4", dark green, glossy, cupped leaves. When compared to Prospera Compact, Mia is faster growing, with even more resistance to downy mildew, and it has a semi-compact habit. 70 days to maturity.

Prospera Italian Large Leaf DMR ('Italian Large-Leaf 2') - A fast growing, large leaved variety with resistance to downy mildew and Fusarium. Uniform plants reach 24-30" tall. A Johnny's Selected Seeds exclusive. F1 hybrid, 75 days to maturity.

'Prospera Red' - The first purple basil with resistance to downy mildew and Fusarium! 3" long, slightly cupped, purple leaves have a classic Genovese flavor. Plants have an upright habit, very similar to the other Prospera Basils. Reaches 18-24" tall. F1 hybrid, 75 days to maturity.

'Rutgers Obsession DMR' - More compact, and a bit slower growing than Devotion (listed on the next page), and also bolts later. Thick, glossy, dark green leaves have a classic spicy Italian basil flavor. Bred by Rutgers University to have excellent disease resistance. Plants reach 16-18" tall. 85 days to maturity. (no photo in catalog)

All varieties on this page 3.25" sold in trays of 18

BASIL, SWEET *(Ocimum basilicum)*

'Aya Prospera Active DMR' - A sweet basil with small to medium cupped leaves and excellent resistance to downy mildew. 75 days to maturity.

x citriodorum 'Pesto Perpetuo' pp# 16,260 - A basil that never flowers! This variegated basil features lime green leaves edged in thin white margins. It was discovered in 2004 as a sport of *O. x citriodorum* 'Lesbos' at Sunny Border Nurseries in Connecticut. Pesto Perpetuo has a very upright, columnar habit, reaching 18-24" tall. 75 days to maturity.

'Rutgers Devotion DMR' usup# 10159212 - An aromatic sweet basil with unrivaled disease resistance, bred by Rutgers University. It sports a uniform upright habit of green leaves and is slow to bolt. Compared to Obsession (listed on the previous page), it grows faster with larger cupped leaves, reaching 18-20" tall. 80 days to maturity. (no photo in catalog)

'Rutgers Passion DMR' usup# 10159212 - A vigorous, sweet, large leaf basil, with a high leaf to stem ratio. Compared to Devotion, its leaves are slightly more cupped, larger, and it's slower to bolt. Also bred by Rutgers University to have excellent disease resistance. Plants reach 16-18" tall. 75 days to maturity. (no photo in catalog)

THAI *(Ocimum basilicum)*

'Cardinal' - A Thai basil with larger leaves, plus purple ornamental, edible flowers. Purple stems hold flat, 2-3" long leaves that have a cinnamon/clove flavor with hints of anise. Very good downy mildew tolerance. Plants reach 14-20" tall. 80 days to maturity.

'Thai Thai Prospera Active DMR' - This aromatic Thai basil grows into a tidy, semi-compact plant with purple stems holding densely packed, dark green leaves 3" long. Compared to the habit of Sweet Thai, Thai Thai has larger leaves and it's a taller, fuller plant with a high resistance to downy mildew. It has the classic Thai basil flavor. 70 days to maturity.

BASIL, LEMON *(Ocimum basilicum)*

'Lime' - Bright lime aroma and flavor from a basil plant! Use in fish and pasta dishes, salsas, and lemonades. The flavor is tangy, zesty, and refreshing. Plants reach 16-20" tall by 8-10" wide. 60-90 days to maturity. (no photo in catalog)

Basil Sweet 'Aya'

Basil Sweet 'Pesto Perpetuo'

Basil Thai 'Cardinal'

Basil 'Thai Thai Prospera Active DMR'

Cutting Celery *(Apium graveolens v. secalinum)*

Exposure: full sun

A leafy herb with bold celery flavor! Easier to grow than standard celery, this herb is a versatile ingredient for salads, soups, stews, and vegetable medleys. Also known as leaf celery or smallage, this plant has a spicier, black pepper flavor when compared to grocery store stalk celery. Technically a biennial, but should be treated as an annual and replanted every year in zones 4-6. 80-85 days to maturity.

All varieties on this page 3.25" sold in trays of 18

Cutting Celery

Chives Garlic

Cilantro 'Confetti'

Dill 'Bouquet' seed head

Dill 'Teddy'

Fennel 'Bronze'

Chives *(Allium sp.)*

Exposure: full sun

Garlic *(A.tuberosum)* - This perennial herb forms a slowly expanding clump of strappy, grass-like foliage 10-20" tall. White globe-shaped flowers bloom in late summer and are very attractive to pollinators. Both the leaves and bulb of this herb are edible. The leaves have a mild garlic flavor while the bulbs are strong and sharp if eaten raw. Also known as Chinese Leeks. 90 days to maturity.

schoenoprasum 'Staro' - Another perennial herb, Staro is the "heaviest" of all the chives. Incredibly thick leaves are perfect for fresh use, freezing, and drying. Sweet, mild onion flavor. Pink globe-shaped flowers bloom in early summer and are very attractive to pollinators. 12-18" tall, 75-85 days to maturity. (no photo in catalog)

Cilantro *(Coriandrum sativum)*

Exposure: full sun

'Confetti' - Attractive, thin, ferny leaves makes chopping this herb a breeze! Its flavor is milder than typical cilantro and is best when plants are young, making this variety more suited to cut and come again harvesting. It's also slower to bolt than typical cilantro. 30-35 days to baby leaf harvest; 80-100 days to seed.

'Cruiser' usup# 9,363,958 - Large leaves and sturdy stems! Compared to Calypso, Cruiser has a tidier, more upright habit and similarly excellent bolt resistance. 55 days to leaf harvest, 120-150 days to seed. (no photo in catalog)

Dill *(Anethum graveolens)*

Exposure: full sun

'Bouquet' - This is the most widely grown cultivar of dill for a reason... It vigorously produces a ton of leaves, and then flowers early, so you have seed in time to pickle your garden cucumbers. Dill is also loved by swallowtail caterpillars, but Bouquet produces enough leaves that there's plenty to share. Plants reach 24-36" tall by 18-24" wide. 40-45 days to leaf harvest, 85-105 days to seed.

'Ella' - Ella is an attractive, compact, dark green dill bred for pot and baby-leaf production. It has a sturdy, upright habit and classic dill flavor. 45-55 days to leaf harvest; 95-115 days to seed. (no photo in catalog)

'Teddy' - A productive and slow bolting dill with full, densely packed leaves. Teddy is vigorous, vibrant green, and productive. The feathery leaves can be harvested at any size. 45-55 days to leaf harvest; 95-115 days to seed.

Fennel *(Foeniculum vulgare)*

Exposure: full sun

'Bronze' - This vigorous, non-bulbing fennel has gorgeous, reddish bronze, finely textured foliage. Plants grow 36-48" tall (in flower) by 24-36" wide, and are slow to bolt, producing yellow flowers in mid-summer. Fennel is highly aromatic and flavorful, with a sweet anise flavor, traditionally used in salads and dressings. 50-60 days to maturity.

All varieties on this page 3.25" sold in trays of 18

Lavender *(Lavandula sp.)*

Exposure: full sun

This aromatic herb has gray-green needle-like foliage. Plants have beautiful fragrant blooms all summer, in shades of pink, blue, or purple. Lavender requires well-drained soil and detests overwatering. Lavender is most famous for its calming fragrance, but it also has medicinal and culinary uses. 60-80 days to maturity (unless otherwise noted). For the most fragrant lavender, harvest when half of the flowers on the flower spike have bloomed.

Lavender English
'BeeZee Dark Blue'

ENGLISH *(Lavandula angustifolia)*

NEW 'BeeZee Dark Blue' - Compared to Hidcote, BeeZee Dark Blue is more compact at just 12-18" tall by 12" wide and more free flowering. Thicker flower spikes are a comparable color to Hidcote, deep purple-blue.

'BeeZee Pink' - An English Lavender with pink flowers! Delicate, white buds open to reveal pink blooms above gray-green leaves in summer. Plants reach 12-18" tall by 12" wide.

Lavender English 'BeeZee Pink'

NEW Blue Spear ('PAS1213794') - Touted as "the showiest English Lavender you can grow and sell!". Blue Spear offers bigger, taller flower spikes with more upright flower stems that stand closer together. Deep purple buds open to purple-blue flowers.

'Hidcote' - A compact heirloom English lavender growing to 12-16" tall by 12-18" wide. Deep purple-blue flowers bloom in early summer. Perennial if sited in well-drained soil. (photo on next page)

'Munstead' - Thought to be the hardiest of the English lavenders, Munstead is a classic heirloom, with a short, compact habit and it blooms from late spring to late summer. Perennial if sited in well-drained soil. (no photo in catalog)

'Vera' - This lavender is a tried and true heirloom that has a strong lavender scent. Lilac-purple flowers bloom in summer. Plants grow 18-36" tall. Perennial with good drainage.

Lavender English 'Blue Spear'

Lavender English 'Hidcote'

Lavender English 'Vera'

FRENCH *(Lavandula x ginginsii)*

'Goodwin Creek Grey' - This French lavender hybrid features dark purple flowers above fragrant, silvery-green foliage. Though not hardy in our area, it makes a wonderful container plant and can be brought inside for winter. A larger variety, growing to 24" tall, responds well to pruning.

Lavender French 'Goodwin Creek Gray'

All varieties on this page 3.25" sold in trays of 18

Lavender 'Meerlo'

Lavender Spanish 'Evergreat Blue'

Lavender Spanish
'La Diva Berry Bountiful'

Lavender Spanish
'La Diva Lush Purple'

Lavender Spanish 'Plum Power'

Lemon Balm 'Limoncello'

NEW allardii 'Meerlo' pp# 25,559 - A beautifully variegated lavender. Its serrated leaves have light yellow to bright cream-colored margins. Light blue to pale lavender blue flowers bloom in summer. Meerlo is a large plant eventually reaching 24-36" tall by 24-36" wide. Cut plants back by 1/3 after flowering to keep the plants compact.

SPANISH *(Lavandula stoechas)*

NEW 'Evergreat Blue - This sturdy, bushy lavender has plump, dark violet blue flower heads topped by very large light blue-purple flags. Fragrant foliage and flowers. 6-12" tall by 12-14" wide.

NEW 'La Diva Berry Bountiful' - Masses of dark berry colored flowers topped in rosy-purple flags, reblooming from late spring to mid-summer. Plants form compact mounds of fragrant, light green leaves. 10-14" tall by 12-14" wide.

'La Diva Berry Rosey' - This sturdy, bushy lavender has soft pink flags on deep rose flowers, blooming all spring and summer. Plants form compact mounds of fragrant, light green leaves. 12-14" tall by 14-16" wide.

NEW 'La Diva Garnet Rouge' - Large wine colored flowers are topped by small garnet colored flags. Plants form compact mounds of fragrant, light green leaves. 12-14" tall by 14-16" wide.

Lavender Spanish
'La Diva Berry Rosey'

Lavender Spanish
'La Diva Garnet Rouge'

NEW 'La Diva Lush Purple' - Large deep purple colored flowers are topped by mid-purple flags. Plants form compact mounds of fragrant, light green leaves. 12-14" tall by 14-16" wide.

NEW 'Plum Power' - Large vivid fuchsia flowers and flags. Plants form compact mounds of fragrant, light green leaves. 12-14" tall by 14-16" wide.

Lemon Balm *(Melissa officinalis)*

Exposure: full sun

This perennial herb is a member of the mint family with an incredible lemony flavor and scent. This plant grows 24-36" tall by 24"+ wide. Small white to pale pink flowers bloom in summer. A perennial in well-drained soil, this herb is not a runner like mint, but it freely reseeds if allowed. Lemon Balm has been used for thousands of years as a medicinal herb in teas, topical treatments, and capsules. Besides tea, it's also used to make pesto and flavor ice cream. Leaves can be harvested at anytime as long as you don't harvest more than two-thirds of the plant. 70 days to flowers.

'Limoncello' - When compared to traditional Lemon Balm, the fragrance and flavor of Limoncello is more pronounced, with a shorter, more relaxed, sprawling habit.

'Mandarina' - Also known as Orange Balm, Mandarina has a distinct orange scent and flavor. It tends to have a trailing habit, making it perfect for a mixed container or hanging basket. (no photo in catalog)

All varieties on this page 3.25" sold in trays of 18

Lemon Verbena *(Aloysia triphylla)*

Exposure: full sun

A plant of many names! Other synonymous names include Lemon Beebrush, *Aloysia citriodora*, *Lippia citriodora, Lippia triphylla, Verbena citriodora*, and *Verbena triphylla*. The leaves of this herb have a strong lemon scent and flavor, even after drying. In tropical locations plants can reach up to 7-10' tall, but this annual will likely top out at 3' tall before winter comes. It also flowers in tropical locales, but will likely be flower-less due to our shorter growing seasons. Lemon Verbena leaves are used to add a lemon flavor to foods and beverages. Harvest leaves once the plant reaches at least 10" tall and has multiple leaves on each stem.

Lemon Verbena

Mint *(Mentha sp.)*

Exposure: full sun

Mints are widely distributed throughout the world, with species native to Eurasia, North America, Africa and Australia. Mint has been in use for thousands of years. It has been found in the burial tombs of ancient Egyptians and was loved by the Romans. There are over 600 varieties of mint, whose uses are many, including flavoring foods, both savory and sweet, hot teas and cold cocktails, herbal medicine, perfumery, and pest repellant. Mints are quite vigorous perennials that can spread quickly via runners. Their small flowers are typically white and borne on spikes above the plant in summer. Because they are so vigorous, mints can grow where other herbs will not. It's a great plant for building confidence in the beginning gardener.

Mint 'Chocolate'

arvensis 'Banana'- Has a mild minty flavor with a distinct, fruity undertone of bananas. It's more subtle and less pungent than regular mint. Leaves are slightly hairy. Best used in teas and desserts. (no photo in catalog)

x piperita citrata 'Chocolate' - Leaves have a distinct chocolately aroma, reminiscent of Thin Mint cookies! Great for both hot and cold teas. It can also be added to salads for an unexpected bite of flavor and of course, desserts. This is a lower growing variety, with smooth, dark green leaves on contrasting maroon stems, reaches 12-24" tall and quickly spreads in the garden.

Mint 'Ginger'

Ginger *(M. x gracilis)* - Slightly fuzzy, variegated green and yellow leaves have a mild mint flavor with a subtle spicy, ginger-like undertone. The aroma is a bit more subdued with a hint of spice. Great in teas, fruit salads, and as a garnish.

'Grapefuit' - This unique hybrid is a cross between apple mint and peppermint. This variety has slightly furry, deep green leaves that emit a lovely citrus-mint scent and are often used in teas. Lavender flower spikes bloom in late summer. Plants reach 12-14" tall and are said to be not quite as aggressive as the typical mint.

Spearmint 'Kentucky Colonel'
(listed on next page)

NEW 'Julep' - This is the mint used commonly to make the drink by the same name, Mint Julep. Its flavor is sweet and fresh, perfect for making sauces, jellies, and drinks. (no photo in catalog)

All varieties on this page 3.25" sold in trays of 18

Mint 'Grapefruit'

Mint 'Lime' (listed on next page)

Mint Mojito

Mint 'Orange'

Mint Variegated Pineapple

Mushroom Plant

Nasturtium 'Alaska Mix'
(listed on next page)

spicata 'Kentucky Colonel' - This spearmint is perfect for Mint Juleps! Kentucky Colonel has a sweeter, more subtle flavor compared to other mints, with less menthol. Plants reach 12-24" tall and quickly spread in the garden. (photo on previous page)

x piperata citrata 'Lime' - A refreshing and versatile herb that is a hybrid of spearmint and water mint. This plant is known for its bright green leaves and zesty citrus aroma. The flavor is tangy citrus-lime with subtle hints of mint. During summer, petite purple flower spikes attract pollinators. Plants reach 16-24" tall. (photo on previous page)

Mojito *(M. x villosa)* - Native to Cuba, this is the original inspiration and ingredient for its namesake cocktail. Plants have fuzzy, quilted, lighter green leaves on darker stems. Its flavor is of classic, refreshing mint. Plants reach 24" tall and quickly spreads in the garden.

'Moroccan' - Sweet & minty! Combine with green tea and sugar for traditional Moroccan tea. (no photo in catalog)

Orange *(M. x piperata citrata)* - Highly aromatic leaves have a citrusy scent, and their flavor is stronger than most. Great for both hot and cold teas and desserts. Similar in appearance to chocolate mint, its leaves are smooth and dark green on contrasting maroon stems. Plants reach 24" tall and readily spreads.

Peppermint *(M. x piperita)* - This naturally occurring hybrid has a cool, minty flavor, great for teas! Perennial, full sun, 12-24" tall, easily spreads in the garden. Pinkish lavender flowers bloom in summer. (no photo in catalog)

Spearmint *(M. x spicata)* - aka Garden Mint, Common Mint, Lamb Mint. A versatile herb with a refreshing, cool, minty flavor. It grows 12-24" tall and easily spreads in the full sun garden. White, pink, and lilac colored flowers bloom in summer. (no photo in catalog)

spicata 'Strawberry' - Minty flavor with a hint of strawberry, great addition to iced tea or lemonade! (no photo in catalog)

Variegated Pineapple *(M. suaveolens 'Variegata')* - Apple green leaves are edged in cream and white. As the name suggests, the aroma of this mint reminds one of pineapple. A larger variety, growing 24" tall that readily spreads in the garden. Only hardy to zone 6.

Mushroom Plant *(Rungia klossii)*

Exposure: part shade

Native to Papua New Guinea. The foliage of the Mushroom Plant has a crispy texture similar to spinach but tastes like mushrooms! Leaves can be eaten raw in salads and on sandwiches. Cooking increases the flavor- use in stir-fries, stews and soups but don't overcook. This fast growing herb prefers a warm shady spot. Cute blue flowers bloom in the summer.

All varieties on this page 3.25" sold in trays of 18

Nasturtium *(Tropaeolum sp.)*

Exposure: full sun

Native to the west coast of South America, where Incans used it as a salad vegetable and medicinal herb. Nasturtiums quickly spread through Europe after they were brought home by Spanish conquistadors. They arrived in the US as early as 1759 and Thomas Jefferson planted them in his vegetable garden at Monticello. The entire plant is edible. Leaves and flowers have a sweet, peppery flavor and are always eaten fresh. The tight buds and seeds can be pickled and used in place of capers. Nasturtium are cold sensitive, should be protected from frost, and perform well in average garden soils.

'Alaska Mix' - Green leaves are splashed and blotched in white. Single, 2" wide flowers are a mix of yellow, crimson, cherry, salmon, and orange. Plants reach 12-14" tall and wide. These will be sown 2-3 per pot to ensure a mix for your customers. 55-65 days to maturity. (photo on previous page)

NEW 'Baby Red' - Rich red 2" flowers are borne on petite mounding plants that feature healthy dark green foliage. 2025 AAS Winner. 60 days to maturity.

NEW 'Baby Yellow' - 2025 AAS Ornamental Winner, Baby Yellow is a petite-flowered, mounding variety with healthy, dark foliage ideal for containers and small space gardens. Flower color is a bright cheery yellow. 60 days to maturity.

'Bloody Mary' - Unique bicolor flowers shift colors as they mature. Buds open to reveal pale yellow to deep red flowers with red flecking and streaking, exhibiting multiple flower colors on the same plant. Plants reach 16-20" tall and trail over the sides of containers. 55-65 days to maturity.

'Cherry Rose' - Incredibly abundant 2-3" flowers are a rich rosy pink with yellow throats. This is a smaller variety, growing 12" tall and wide. 65 days to maturity.

Nasturtium 'Cherry Rose'

Nasturtium 'Empress of India'

'Empress of India' - Victorian heirloom from 1889. Small, dark blue-green leaves and smoldering scarlet flowers make a striking contrast on mounded, non-vining plants. 70-85 days to maturity.

'Jewel Mix' - These bright, 2" blooms of red, pink, orange, and yellow are held above light green foliage on a mounded plant habit. 55-65 days to maturity.

'Ladybird Cream Purple Spot' - Very early to flower! Dwarf, compact plants only reach 10-12" tall, but bloom early and continue until frost. Very prolific flowering. The eye-catching flowers are creamy yellow with raspberry splashed throats. 60 days to maturity.

'Peach Melba' - Very early to flower! Dwarf, compact plants only reach 10-12" tall, but bloom early and continue until frost. The eye-catching flowers are creamy yellow with raspberry splashed throats. 60 days to maturity.

'Salmon Baby' - Ruffled, semi-double salmon-orange blooms contrast nicely with the darker green foliage. The smallest variety we offer, growing 8-12" tall by 12-18" wide. 80 days to maturity.

NEW 'Tip Top Alaska Salmon' - Salmon colored flowers above splash variegated foliage. 60 days to maturity.

NEW 'Tip Top Alaska Scarlet' - Scarlet colored flowers above splash variegated foliage. 60 days to maturity. (no photo in catalog)

Nasturtium 'Tip Top Alaska Salmon'

'Tip Top Rose' - This vigorous yet compact variety has large, uniquely colored bright rose flowers that hold their color. Plants grow 14" tall by 18" wide. 2020 AAS Flower Winner. 60 days to maturity

Oregano (*Origanum sp.*)

Exposure: full sun

Greek (*O. vulgare hirtum*) - Incredibly aromatic and deeply flavorful, Greek Oregano is a staple in the Mediterranean kitchen, great for pizza and Italian cooking. White flowers bloom in summer. Perennial if sited in dry, well-drained soil. Plants reach 24-30" tall. 80-90 days to maturity. (no photo in catalog)

vulgare 'Hot and Spicy' - This highly aromatic herb has a strong, somewhat spicy flavor that is great for Italian or Mexican dishes. Grows 12-18" tall and wide, full sun. Tiny flowers bloom in summer. 45 days to maturity. (no photo in catalog)

'Pizza' - This oregano tastes like a cross between Italian and Greek oregano. By far the most popular oregano in 2025. (no photo in catalog)

vulgare 'Variegatum' - Small green leaves are edged in white. They have a bold and earthy flavor with a slight bitterness. Used most frequently in Italian cuisine. Pale pink flowers bloom in summer. 12-16" tall by 16" wide. 45 days to maturity.

Parsley (*Petroselinum crispum*)

Exposure: full sun

'Forest Green' - A delicately curled and compact variety that has long stems with dark green, double and tripled curled leaves. Adapts well to most growing sites. 75 days to maturity. (no photo in catalog)

'Giant of Italy' - Huge, dark green leaves have great flavor! A very vigorous variety, with strong upright stems, making it a breeze to harvest, with very high yields. 18-20" tall, 75 days to maturity. (no photo in catalog)

'Green Dream' - A new cutleaf parsley, with elegant feathery leaves and tender, edible stems! Very aromatic as well as flavorful. 60-80 days to maturity.

All varieties on this page 3.25" sold in trays of 18

Rosemary *(Rosemarinus officinalis)*

Exposure: full sun

Rosemary has gray-green needle-like leaves and white, pink, or blue flowers in early summer. It's typically hardy to zone 8, prefers well-drained soil, full sun, and it is fairly resistant to most pests and plant diseases. The leaves have a pungent, slightly bitter taste, used fresh or dried, usually to season food. 80 days to maturity.

NEW 'Abraxas' - Abraxas forms a dense bushy plant and is touted as the best Rosemary for culinary purposes. Highly aromatic with a strong flavor. (no photo in catalog)

NEW 'Barbeque' - Barbeque is known for its strong straight woody stems that can be used as skewers, perfect for the barbeque. (no photo in catalog)

'Blue Lagoon' - This semi-prostrate variety reaches 24" tall by 32" wide and has a somewhat upright to softly cascading habit. In more temperate zones, it features vivid blue flowers in spring.

'Gorizia' - Discovered in and named for Gorizia, Italy and introduced in 1986. The leaves of this variety are twice the size of normal rosemary on thick rigid stems that can double as skewers. It has an upright habit, reaching 36-48" tall by 24-36" wide if given excellent drainage. (no photo in catalog)

'Hill's Hardy' - This rosemary is said to be hardy to zone 6b. Its flavor is somewhat milder than typical rosemary. It has an upright bushy habit, and grows 36-48" tall by 24-36" wide.

'Huntington Carpet' - This herb forms a beautiful cascading carpet of aromatic needle-like foliage, growing 6-12" tall by 36-48" wide. In more temperate climates, powder blue flowers bloom in spring.

'Salem' - Supposedly the hardiest rosemary available with excellent tolerance of hot humid summers. One source says the name is Salem because this rosemary is hardy as far north as Salem, Massachusetts, while others say it was bred in Salem, North Carolina. Plants can reach 24-36" tall by 12-24" wide, with light blue flowers in late spring. (no photo in catalog)

'Speedy' - More vigorous and compact than the straight species, Speedy grows to be 24-30" tall and wide. In warmer climates where its hardy, light purple flowers bloom in spring. (no photo in catalog)

'Spice Island' - The story goes that this Rosemary is so flavorful that it was chosen by, and named for, the well known Spice Islands Spice Company. Very upright habit. (no photo in catalog)

'Tuscan Blue' - A vigorous upright grower with deep blue flowers, blooming longer than your typical rosemary.

Sage 'Berggarten'

Sage 'Berggarten Variegated'

Sage Golden Variegated ('Icterina')

Thyme 'Cascata Lemonade'

Thyme 'Foxley'

Sage *(Salvia officinalis)*

Exposure: full sun

Sage has been cultivated for thousands of years for both medicinal and culinary purposes. Usually hardy to zone 4, but only if sited in well-drained soil. Strongly aromatic leaves average 5" long. Color ranges from blue-gray to bright green, and the foliage is usually soft and fuzzy or smooth and pebbled. Plants can reach 24" tall, with blue flowers in early summer. 75 days to maturity.

'Berggarten' - This German cultivar has strongly aromatic, broad, silver-gray leaves. Plants can grow 12-24" tall x 36" wide. Its named after the mountain gardening area of a large estate in Hanover, Germany called Herrenhauser.

'Berggarten Variegated' - A variegated version of the classic Berggarten Sage. Silver-green leaves have irregular creamy white edges. Grows 12-24" tall x 36" wide.

Golden Variegated ('Icterina') - This sage has chartreuse leaves edged in bright gold. Keep plants trimmed to encourage fresh, new growth for the best flavor. Plants grow 24" tall by 18-24" wide.

'Grower's Friend' - This sage is an outstanding choice because it rarely, if ever, blooms! No need to fret over plants bolting. Velvety gray-green leaves have a nice clean sage flavor. Plants grow 18" tall. (photo on pg 3)

Thyme *(Thymus sp.)*

Exposure: full sun

There are almost 350 species of Thyme, but only a handful are used as an herb. Culinary thyme is suspected to have originated in the Mediterranean, and has been in use since the time of the ancient Egyptians, who valued it for its disinfectant and antiseptic properties. All of the thyme we are growing are perennials (unless noted otherwise), as long as they have decent winter drainage. 90 days to maturity.

Caraway *(T. herba barona)* - This creeping thyme forms a low mat, 2-3" tall. Its tiny leaves have a strong scent of caraway and the flavor is a combination of caraway and thyme. Tiny pink flowers bloom in mid-summer. (no photo in catalog)

citriodorus 'Cascata Lemonade' - Our favorite thyme, smells just like lemonade! Use it to add a citrus kick to meals or make a refreshing lemon tea. As the name suggests, this variety has a trailing, cascading habit. Pink flowers bloom in mid-summer.

English *(T. vulgaris)* - The seed/strain we're growing for 2027 is from High Mowing Organic Seeds, and hardy to zone 4, also qualifying it as a Winter Thyme. (photo on next page)

vulgaris 'Faustinoi' - More compact and upright than English thyme, Faustinoi grows 8" tall by 12" wide. Only hardy to zone 7.

pulegioides 'Foxley' - Typically used in tea, this variegated variety is also a substitute for common thyme in the kitchen. Perennial in well-drained soils, growing 8" tall by 16" wide. Pale pink flowers bloom in summer, attracting pollinators!

All varieties on this page 3.25" sold in trays of 18

THYME continued...

French Summer and German Winter *(T. vulgaris)* - Winter versus Summer thyme: both of these are botanically classified as *Thymus vulgaris*, with the "Summer" name assigned to *T. vulgaris* strains that are more pungently flavored and less hardy, typically zone 6. "Winter" is usually assigned to *T. vulgaris* strains that are more cold hardy, this one to zone 5, but possibly not as aromatic. Our Summer and Winter Thyme seed was sourced from Johnny's Selected Seeds. (no photo in catalog)

citriodorus 'Golden Variegated' - Lemon scented and citrusy flavored green leaves edged in gold. Upright plants grow to 12" tall. Pale lavender flowers bloom in summer. (no photo in catalog)

Juniper (T. leucotrichus) - aka Moonlight Thyme. Silvery, rigid needle-like leaves have a sharp, spicy flavor. This thyme forms a low growing mat, 6" tall by 12" wide, and blooms profusely in early summer. Perennial to zone 5 if sited in well-drained soil.

Lavender *(T. thracicus)* - aka Woollystem Thyme. Close your eyes and smell this plant… it smells exactly like lavender! Not recommended for savory dishes as the flavor can be overpowering, but can be used sparingly in desserts and teas. This plant has a low, ground hugging habit, only reaching 4-6" tall, with a spread up to 18". Dark gold stems are covered in mini leaves. Pale violet to pink flowers bloom in early summer.

citriodorus 'Lime Golden' - This delightful plant is adorned with bright green to chartreuse leaves that emit a refreshing lime fragrance. It's best used in fresh applications that allow the citrusy aroma to shine through. The flavor does not hold up well to cooking. In summer, tiny light pink flowers bloom, attracting pollinators. Plants reach 10-12" tall and wide.

Orangelo *(T. fragrantissimus)* - This French thyme is incredibly vigorous and easy-to-grow, even in poor soils. For peak flavor, harvest leaves just before it blooms. The taste is earthy thyme with a bright note of minty orange, distinctly sweeter and less pungent than German Winter and Summer thyme. If plants are allowed to bloom in summer, they form a carpet of small, blush pink flowers that pollinators adore. Hardy to zone 6, possibly even to zone 4 with optimum drainage.

Pizza *(T. nummularius)* - Native to Türkiye and Iran, but with all the flavor of Italy! Also called Italian Thyme, the flavor of this herb is a blend of oregano and thyme. Besides its use as a culinary herb, this thyme is also added to herbal teas for its calming effect on the body. Plants grow 12-15" tall and wide, and pink flowers bloom in early summer.

'Rose Scented' - This thyme has an undeniably sweet, floral scent. Like lavender thyme, avoid use in savory dishes as the floral flavor can be quite strong. Try making a rose-scented tea. Its growth habit is semi-upright, forming cute tufts up to 3-5" tall. Lavender-pink flowers bloom in summer.

Thyme ‘Silver Posie’

Thyme ‘Silver Queen’

Thyme ‘Spicy Orange’

Thyme ‘Tabor’

Thyme ‘Wedgewood’

THYME continued...

vulgaris ‘Silver Posie’ - A variegated English thyme, tiny gray green leaves are edged in silver. Semi upright plants grow to 6” tall by 16” wide. Excellent for both culinary and landscape use.

citriodorus ‘Silver Queen’ - A variegated lemon thyme with tiny green leaves edged in silver. Adds citrusy notes to culinary creations.

citriodorus ‘Spicy Orange’ - As the name suggests, this thyme smells of orange spice. The fine, green, needle-like leaves are a great addition to poultry, fish, or pork dishes. Compared to Archer’s Gold, Spicy Orange has a more trailing habit, eager to cascade over the edge of its container. Pink flowers bloom in early to mid-summer.

pulegioides 'Tabor' - A vigorous variety with large, rounded glossy leaves. Tabor is extremely aromatic and great for cooking. It has a unique flavor profile described as sweet and savory, with hints of peppermint, lemon, oregano, and cinnamon. Hardy to zone 6 if planted in extremely well-drained soil. Plants grow 6-8" tall by 16-18" wide.

vulgaris 'Wedgewood' - Dark green leaves with yellow splotches. Vigorous plants have an upright growth habit, reaching 12” tall. Compared to English Thyme, the leaves are larger while the flavor is sweeter and milder.

BERRIES

Blackberries, thornless *(Rubus sp.)*

Exposure: full sun

'Big Daddy' ppaf - A vigorous, disease resistant floricane type of thornless blackberry producing large crops of huge, sweet berries in July. Floricane plants fruit on second year canes. These berries are exceptional for fresh eating but hold up well for freezing and jams/jellies. Shrubs grow 4-6' tall by 4-5' wide.

'Triple Crown' - Summer bearing floricane; named for its three attributes: flavor, productivity and vigor. This extremely hardy variety is disease resistant and produces very large, flavorful berries. The berries begin to ripen in mid-July and you can harvest the large berries everyday, for over 30 days.

Raspberries *(Rubus sp.)*

Exposure: full sun

'Caroline' - Fall bearing; with rich, full, and intense flavor, this raspberry is a great cultivar for the home gardener. Compared to Heritage, Caroline has sweeter berries, ripens two weeks earlier, is a heavier producer, and has better resistance to disease and insects. White flowers in May turn into red raspberries that begin to ripen in late August and continue until fall. Shrubs grow 4-6' tall by 4-5' wide.

'Crimson Night' pp#24,949 - Fall bearing; Crimson Night was selected for its heavy crop load, good sweet flavor, and glossy, burgundy red fruit. The canes are dark magenta in color with dark green leaves, adding to its value in the landscape. Developed at Cornell's College of Agriculture and Life Sciences. Shrubs grow 4-5' tall and wide.

'Double Gold' pp#24,811 - Everbearing; Double Gold produces a very tasty, deeply blushed, golden champagne-colored fruit with a distinctive conical shape. A vigorous grower, it will produce substantial crops. It earned the "double" in its name because it produces a summer and fall crop. Developed at Cornell's College of Agriculture and Life Sciences.

'Fall Gold' - Everbearing; produces its first crop in July on last years growth, and a second crop in September on this years new growth. The sweet berries have a good flavor and are similar to red raspberries in all respects but color. (photo on previous page)

'Glencoe' - Summer bearing; Glencoe was developed by the Scottish Crop Research Institute. This incredible raspberry has SPINE-FREE canes which are easy to manage. The growth habit is bushy and less vigorous than most red raspberries, which are ideal traits for the homeowner. The fruit has a lovely intense flavor. Shrubs grow 4-6' tall by 4-5' wide. (photo on previous page)

'Heritage' - Everbearing; This classic, sturdy upright plant needs no staking! Firm, flavorful, sweet, dark red raspberries that can be harvested in early summer and then again in late summer. Plants grow 4-5' tall by 2-3' wide. (photo on previous page)

'Jewel' - A black raspberry! Jewel produces large, glossy, rich black raspberries that are of good quality and flavorful. They ripen in early July, are self-pollinating, and have sturdy and reliable fruit production. Jewel's berries are great for fresh eating, preserves, and pies. This black raspberry is a cross between Bristol and Dundee. (photo on previous page)

Strawberry ‘Allstar’

Strawberry ‘Eversweet’

Strawberries *(Fragaria sp.)*

Exposure: full sun

Strawberries are grouped into two types: Junebearing and everbearing. Junebearing produce one crop per year early in the season (typically June). The berries of Junebearers are normally larger than the berries produced by everbearing plants. Junebearers are sensitive to the length of day, and send out runners in spring as day length increases. Everbearing types are day-neutral (not sensitive to the length of day), producing its first crop in late spring and then subsequent crops at six week intervals throughout summer and into fall.

‘Allstar’ - A late-midseason Junebearing variety that is extremely vigorous and easy to grow. It is very productive, with copious yields of high quality fruit that is large and firm, with good flavor and color, perfect for eating fresh. It is resistant to leaf scorch, powdery mildew, and five races of red stele. Allstar is considered to be an improved 'Surecrop'.

‘Eversweet’ - Bred especially for the South, this everbearing, disease resistant strawberry tolerates temperatures of 100°F or more without loss of fruit quality. Its conical, bright red berries are sweet and firm, recommended for fresh eating or freezing. Mature plants reach 8-10” tall by 30-36” wide.
